Full product description

Xiaomi SmartMi Electric Heater 1S

Xiaomi Smartmi Electric Heater 1S is an air heater with **2 heating modes** and a clever protection system. The device creates air circulation during operation, which effectively and evenly distributes warm air around the room. This way of operation eliminates the possibility of overheating and excessive drying out of the air in the given area of the apartment or office

Efficient operation based on convection

Xiaomi SmartMi Electric Heater 1S is based on the principle of convection. The heating elements are located at the bottom of the device, the air after heating moves upwards through a vertical channel, pushing the cold air downwards. This causes air exchange and allows warm air to circulate through the room. This is the most **efficient way** to heat a room in a short period of time.

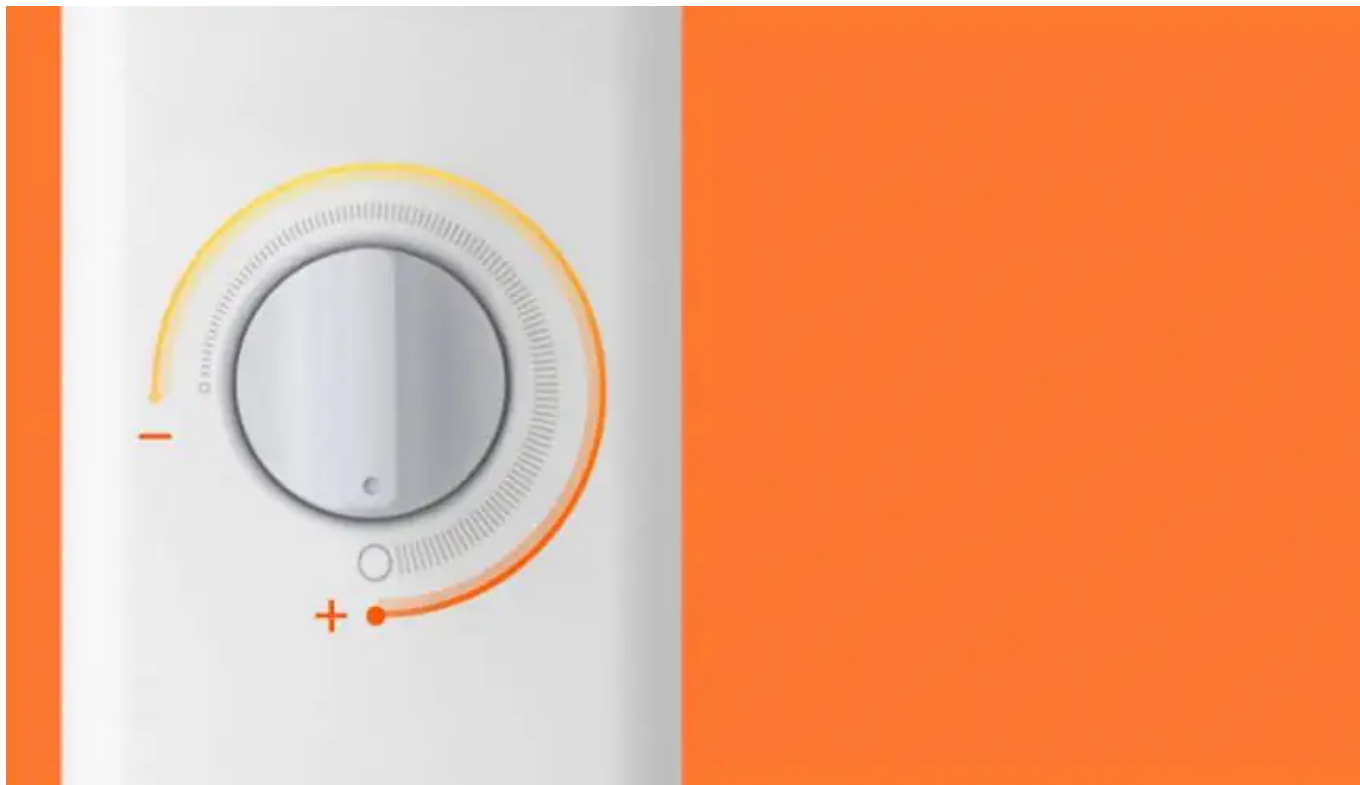

Heats up in a few moments

The heating element mounted in the heater has a length of **twenty meters**. It is made of a special alloy of iron, chromium and aluminum, which is characterized by high density and heat resistance. In addition, this alloy contributes to immediate heating when the heater is activated. The vent grille reaches a **temperature of 120 degrees in just 72 seconds**. This in turn means that the room temperature also rises in the shortest possible time.

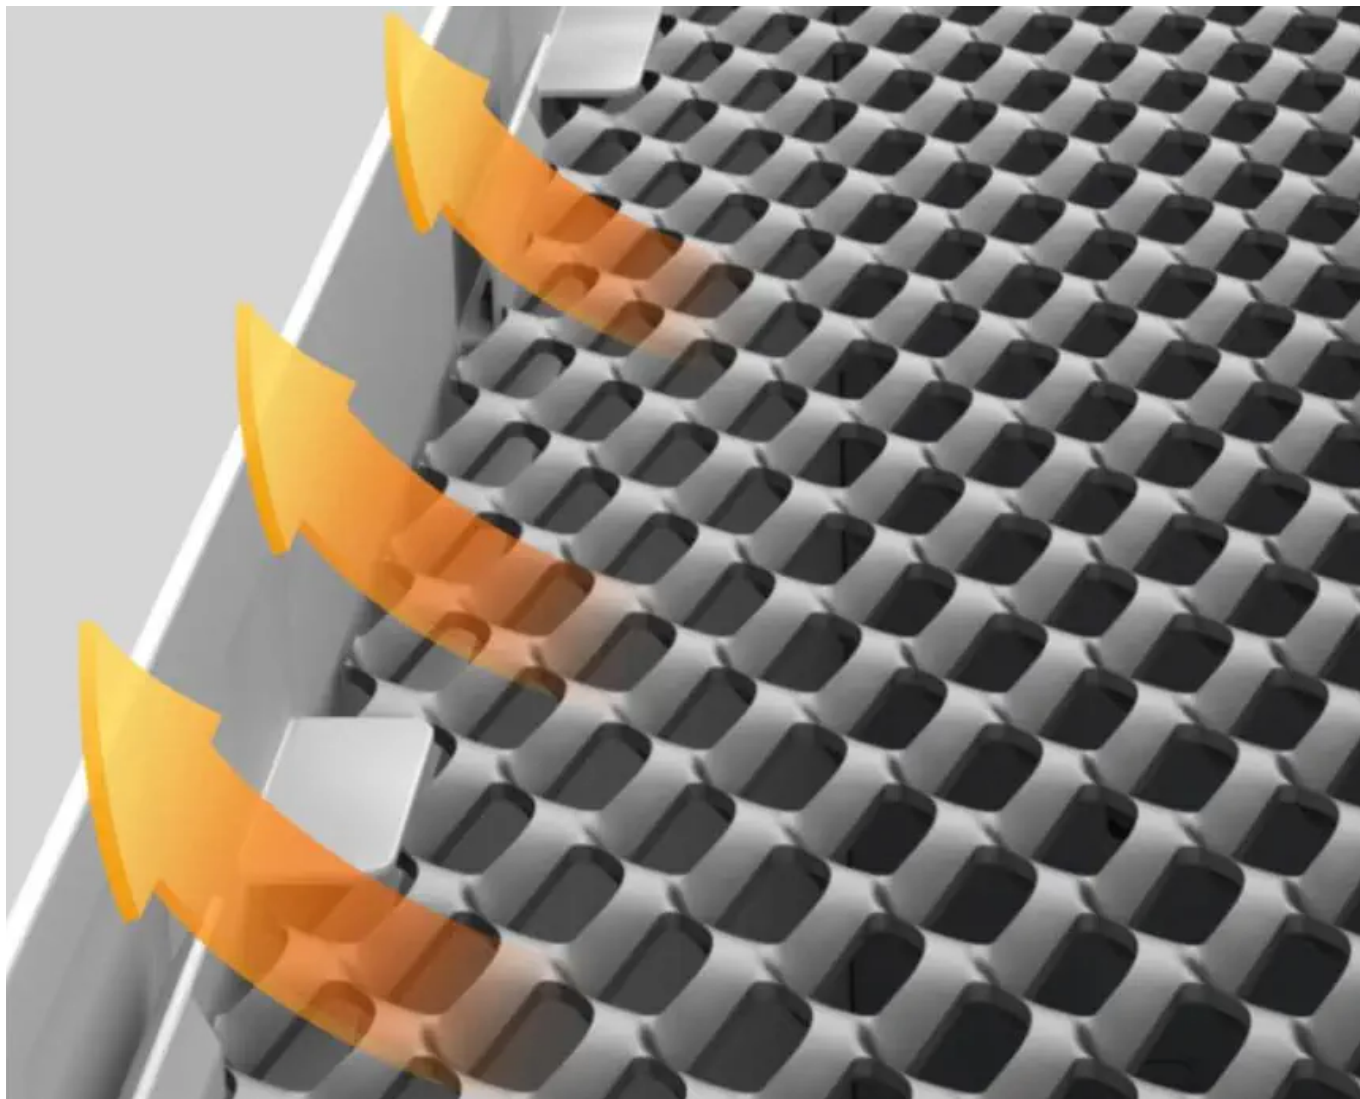

Two heating modes

The heater has **2 different heating modes** for easy heating of the room and to increase the temperature significantly. The heater has a power saving mode of **1000 watts** and a **power mode of 2000 watts**.

Doesn't bother you at night

Xiaomi Smartmi Electric Heater 1S doesn't make any noise or discomfort when heating. You can leave it on all night, it will not disturb your sleep.

Fits any interior

The radiator has compact dimensions and a sleek appearance. It fits into any interior and does not stand out even in the smallest rooms. The heater is 44.5 centimeters high and 20 centimeters thick. The casing is made of galvanized sheet metal with a thickness of 0.6 millimeters. The components are RoHS compliant. The ingenious design of the device ensures that it is robust and resistant to wear and tear. Protective coating has been applied by electrostatic spraying to avoid the release of hazardous substances such as formaldehyde.
