Manufacturer: TELTONIKA

Referention number: DNXGFQOOJRMNHI

Product features

Cartridge type	Not available
Integrated antenna	Yes
Oven input frequency	125 kHz
Interface	RF Wireless
Product colour	Black

Full product description

Teltonika RFID 1-Wire Reader

One of the implemented features for fleet management devices is 1-Wire data protocol, which can be used to read RFID tags by emulating them using **iButton protocols**. This is a convenient way to implement driver authentication in vehicles if you want to use **RFID tags** with minimal configuration complexity.

RFID 1-Wire readers work perfectly in such cases

- **Immobilizer** - preventing anyone from starting the vehicle without first scanning the iButton.
- **Authorized Driving** - tracking who is driving the vehicle based on the iButton ID they use to authenticate themselves.
- **AutoGeofencing** - lets you know when a car leaves certain areas without iButton authorization.
