Full product description

Innovative Teltonika Eye Sensor BTSMP1

Teltonika Eye Sensor (BTSMP1) is an advanced **Bluetooth Low Energy (BLE)** sensor that can track temperature, humidity, motion and magnet detection. With these features, **the BTSMP1** offers extensive monitoring and asset management capabilities, opening up new horizons for your business.

Wide Application

The Teltonika Eye Sensor BTSMP1 is ideal for **traceability and supply tracking** applications. It works well for monitoring moving objects in logistics such as trailers and containers, in agriculture for tracking tractor attachments, and in construction where it can be used to manage tools and inventory. The sensor is also used in cold-chain refrigerators, providing precise data on storage conditions.

Built-in Features

The **BTSMP1** sensor has a built-in accelerometer that detects movements or falling objects. The magnet detection function enables wireless monitoring of opening and closing, which is particularly useful for notifying events such as the opening of trailer doors. **It supports iBeacon and Eddystone protocols**, adding to its versatility and compatibility with various platforms.
