Full product description

GPS locator for the discerning

The **Teltonika FMA120** is a piece of **equipment for those who want full control** over their vehicle's location, not just nice-looking data. It works based on GSM and GNSS technology, has a **built-in rechargeable battery**, offers **accuracy of up to 3 meters** and is ready to operate even without external power. It's a product that's made for monitoring fleets, private cars, machinery and many other applications where positioning matters.

GSM - stable data transmission

The **Teltonika FMA120** supports **quad-band GSM**, which allows the device to be used in many countries without changing hardware. **GPRS Class 12** technology enables seamless communication with the server, and **SMS support** allows the locator to be managed remotely - even without internet. This is important where constant **connectivity is crucial** to system operation.

GNSS - positioning without ambiguity

The device supports **GPS, GLONASS, GALILEO, BEIDOU, QZSS, SBAS and AGPS**, giving access to a huge number of satellites and achieving high accuracy. **Sensitivity of -165 dBm** and fast start modes (hot start <1s) enable instant signal capture. This keeps **the vehicle's position up-to-date, precise and stable** even in harsh urban or industrial conditions.

Built-in rechargeable battery - continuity of tracking

The built-in **170 mAh Li-ion battery** is an important component of the device, which protects continuity of operation in the event of a power cut. Even if someone disconnects the locator from the vehicle, **the FMA120 continues to transmit location and alarm messages**. It's a feature that can determine the effectiveness of monitoring - especially in the event of theft, tampering or failure.

Versatile product for many applications

The **Teltonika FMA120** isn't just a locator - it's **a powerful vehicle data center**. It has analog and digital inputs, 1-Wire® support, immobilizer function, accident detection, fuel monitoring and CAN bus connectivity. It is **compatible with many fleet management systems** and allows you to fully customize the way it works to meet your needs.
