Referention number: DNXXGHHQMDRMMHI

Information:

Teltonika RMS 5 years is a licence for secure and convenient remote management of one Teltonika router for 5 years. It enables real-time device monitoring, remote configuration, software updates, problem diagnostics, and the generation of reports and analyses. As a result, the equipment can be managed from anywhere, without physical access. It is an economical solution that simplifies administration, increases work efficiency, and ensures a high level of data security thanks to encryption and activity monitoring.

Full product description

Teltonika RMS 5 Years - Comprehensive Remote Router Management

Meet Teltonika RMS 5 years, a license designed for efficient and secure remote management of Teltonika routers. With Remote Management System, you gain full control over your equipment from anywhere in the world. With just a few clicks, you can ensure seamless operation of your devices and gain full access to all advanced features.

Full control and advanced features

Teltonika Remote Management System provides real-time remote monitoring and management of devices. This allows users to remotely configure settings, update software and diagnose problems, without the need for physical access to the device. The system also enables the **generation of detailed reports** and analysis to help optimize the company's equipment and services.

Economy and security

Teltonika's **5-year RMS** package allows for cheaper and simpler management of a single router for the entire license period. This is a more efficient solution than purchasing separate RMS credits that would require constant renewal. In addition, advanced encryption and activity monitoring mechanisms ensure **full data security**, which is crucial for any company concerned about the confidentiality and reliability of its systems.
