Full product description

TELTONIKA RUTM56 - 5G router

TELTONIKA RUTM56 DUAL MODEM ROUTER 5G

Rich set of industrial and IoT features

The router supports **MODBUS TCP, MQTT, DNP3, DLMS, OPC UA, GNSS** and other communication standards for industrial and IoT environments. **Data-to-server protocols** are also available (HTTP, MQTT, Azure MQTT), and an advanced API allows remote management by in-house systems. The ability to set automation rules (e.g., for signal changes or digital input status) makes it easy to implement **intelligent automation and telemetry solutions**.

Operator-class security and management

The router features an advanced **firewall, VLAN system, port control, protection against DDoS attacks**, as well as full support for VPN (OpenVPN, WireGuard, ZeroTier, DMVPN, L2TP, IPsec). In addition, **TPM 2.0** protects access to the device, and Let's Encrypt's SSL certificate generation simplifies the process of encrypting communications. **RMS** (Remote Management System) provides remote monitoring and configuration of multiple devices from a single location.
