Full product description

PoE 24 V, 0.75 A power supply

The Tinycontrol Poe power supply is designed for mains devices that are powered via a twisted-pair cable and require 24 V. The maximum current is 0.75 A, which means that the maximum power of the device being powered is 18 W. The maximum speed at which devices connected to the power supply can operate is 100 Mbps.

Place the power supply between the receiving device and the switch by connecting the network cable to the PoE and LAN ports respectively. The LED indicates whether the device is working properly, as well as problems, e.g. short circuit of the line. The PSU is plugged directly into a 230 V power outlet so there are no additional cables to be laid and protected.
