Full product description

PoE 48V 0.5A Gigabit power supply

The Tinycontrol Poe power supply is designed for mains devices that are powered via twisted-pair cable and require 48V. The maximum current is 0.5A, i.e. the maximum power of a powered device is 24W. The maximum speed at which devices connected to the power supply can operate is 1Gbps.

Place the power supply between the receiving device and the switch by connecting the network cable to the POE and LAN ports respectively. The LED indicates whether the device is working properly as well as a problem situation such as a shorted line.

The PSU is plugged into a 230V power outlet via a power cable, which gives us greater flexibility in mounting and positioning the PSU.
