Full product description

Power strip managed by IP 5G10A V2 PRO

The power strip is equipped with 5 230V sockets with grounding. Thanks to the Ethernet IP module, it is possible to remotely control the sockets through a built-in web server or SNMP protocol. As the sockets work independently, we can turn on or off the selected device without interrupting the work of other devices connected to the strip. The PRO version is equipped with one analog input working with voltage up to 36V and two digital inputs.

The strip has been prepared for mounting in a 19" rack, the RJ45 network output and additional sensors are located on the front of the strip so we have easy access to these connectors. The strip has an input for DS18B20 temperature detector operating in 1wire standard. Using an additional splitter you can connect up to 4 sensors. The sockets are protected with 2x10A fuses.
