Full product description

Tinycontroller GSM v3 controller

Thanks to the GSM v3 controller we can monitor physical parameters such as current voltage or other derivatives through the cellular network. It supports remote switching on and off of up to 5 outputs. The control can be carried out via SMS messages or as data transmission via the cellular network. Data can be sent to an external server for collection, analysis.

Controller features

- Management via SMS or USB (connection to computer)
- Pulse counting at INP4D input
- Upgrade new software via USB
- Monitoring of digital states e.g. detectors, position states
- Authorization of sent commands by password
