Full product description

Tinycontrol alcohol sensor MQ-3

The MQ-3 module allows you to detect the alcohol concentration in the air. The module is mounted on a PCB prepared for connection to Arduino, AVR, PIC or other. Additionally, mounting holes have been prepared on the board for easy mounting to the ground.

The module allows you to measure the alcohol concentration in the air. On the analogue output a voltage is given depending on the detected alcohol concentration. The value of the engraved concentration is given to the digital output. The module can be calibrated with a potentiometer located on the board.
