Full product description

Tinycontrol relay board 16A x5

The relay board is one of the basic accessories for the Tinycontrol lan controller. It is controlled from the lane controller and enables selective switching on and off of electrical devices connected to the relay screw terminals. The board contains 5 relays, which allows independent control of 5 different devices.

The relay board is compatible with GSM v3 controller and lank controller 2. We have the ability to switch on, off and reset on each of the relays.

High quality relays with a special design of electrical contacts ensuring long-term operation are used. The board is connected to the control device through a multi-core tape with appropriate connectors. No additional power supply is required - the board is powered from the LAN/GSM controller.
