Full product description

Tinycontrol board ON/OFF/PWM control board

The board prepared for the lan controller version 3, its dimensions have been adjusted to the lan controller housing. The board has 4 high power MOSFET transistors, which can be used to power devices with 1-3A current consumption. In the cover plate there are OUT1-4 lines from the controller's lan which would be covered without it. Thanks to that we have access to 10 outputs: OUT0 - OUT5 and PWM0 - PWM3.
