Full product description

Multitasking switch

An **8-port** PoE 2 powered gigabit switch with **10/100 Mbps** throughput compliant with **IEEE802.3af/at** . The switch works without interference at a **distance of 250 meters** and you can extend its operation with a single key. Data transmission over this distance is interference-free.

Storm not so scary

The switch **supports VLAN isolation**, which ensures that your network is protected from excessive traffic passing through the switch. In addition, the switch has **6KV port lightning protection**, so you can use it outdoors.

A small and yet extremely practical switch

The switch supports MAC addresses - **16K entries**, and additionally the switch learns these addresses by itself. It also controls **duplex** flow and **half duplex backpressure**.

Additionally, thanks to compact design, the switch can be a standalone device or you can mount it on the wall near other devices.
