Full product description

Wireless router TP-Link Archer AX10

TP-Link Archer AX10 is a new router supporting modern wireless standard **Wi-Fi 6 (802.11x)**. Wi-Fi 6 standard ensures support for higher data rates and throughput. TP-Link Archer AX10 can simultaneously operate in two frequency bands - 2.4 and 5 GHz. The maximum supported data rate can reach **300 and 1201 Mbps** respectively. In addition, the router has been equipped with a 1.5 GHz tri-core processor. To ensure a wide coverage area and stable signal, the manufacturer has used 4 external antennas with high gain.

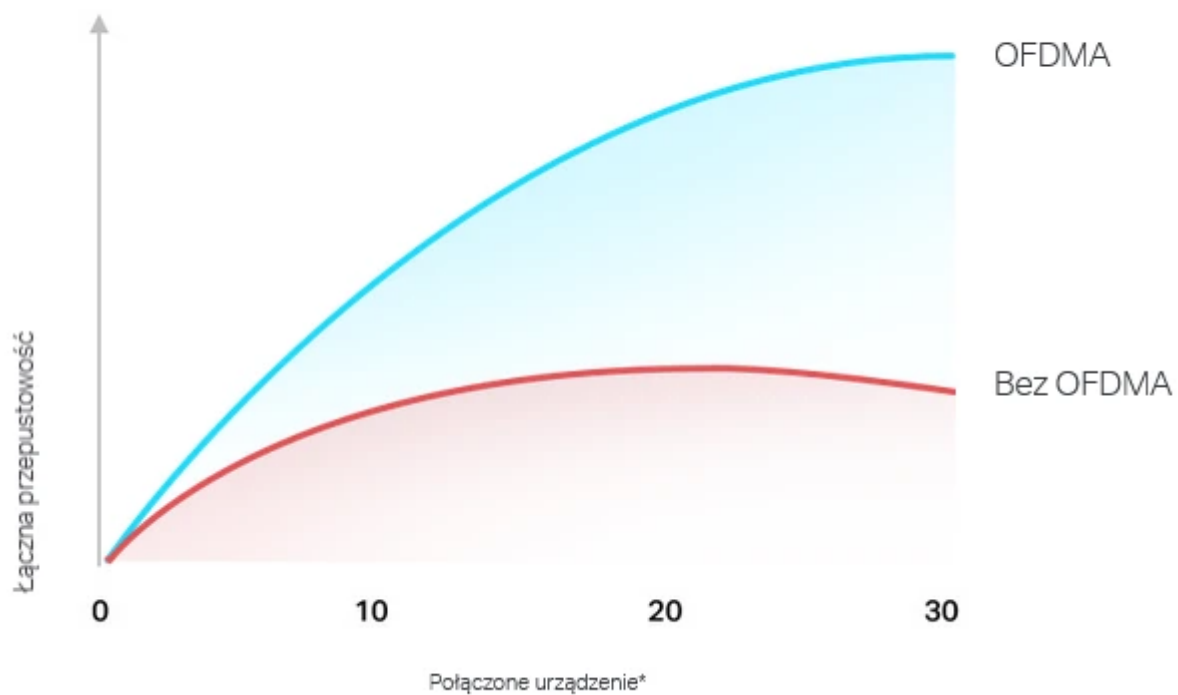

Revolutionary Wi-Fi 6

The **Wi-Fi 6** standard will provide a significant increase in the speed and bandwidth of your network. Switch to the next generation of Wi-Fi to enjoy the faster internet of the future with the ability to connect more devices.

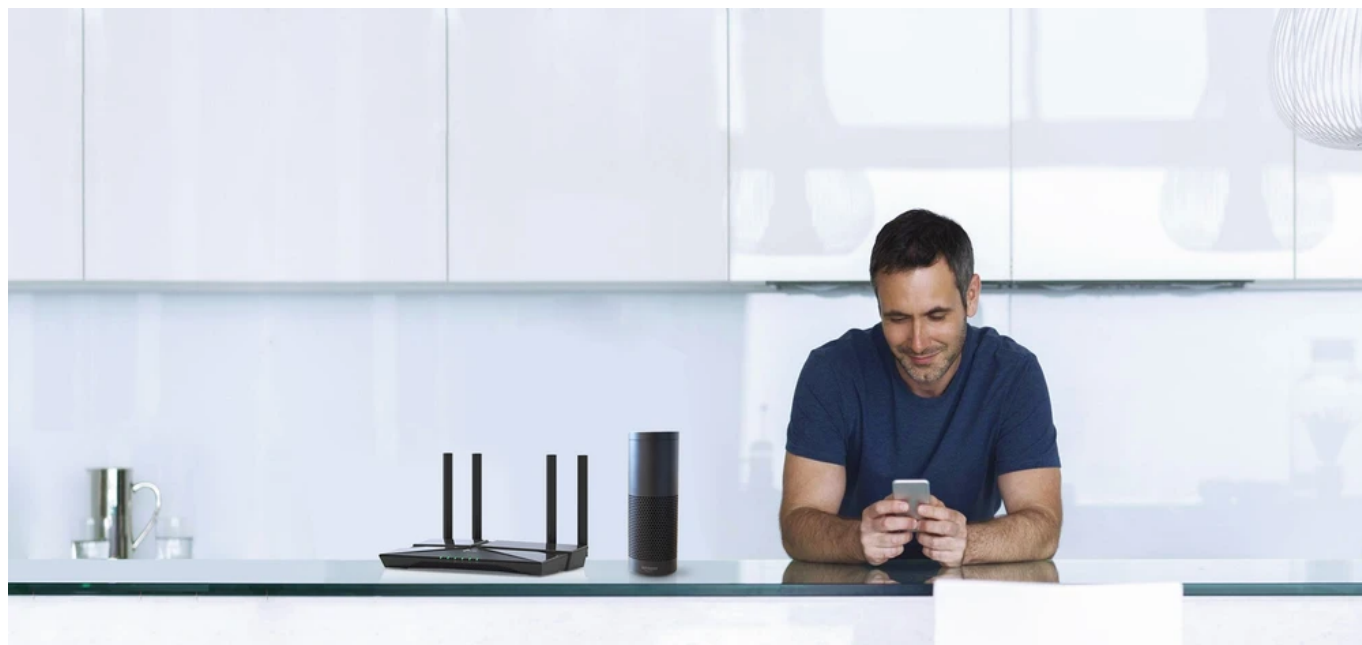

Add more Wi-Fi devices without compromising network performance

OFDMA allows multiple devices to share the same bandwidth, enabling more devices to connect to a Wi-Fi 6 router than to a standard Wi-Fi 5 router.

Minimum latency

Wi-Fi 6 optimizes data transfer by allowing data packets from different applications to share a single stream, thereby **reducing latency**. Enjoy impeccable audio and video quality while communicating, playing fast online games, and instantly downloading video on multiple devices at once.

Immediate response

A powerful **1.5GHz** tri-core processor delivers big data with minimal network latency. Enjoy instant feedback when playing online video and high quality video when communicating.

Enhanced Wi-Fi coverage

Beam shaping technology and 4 high-gain antennas deliver a strong, stable Wi-Fi signal throughout your home, providing seamless connectivity for any device.

Easy to configure

The intuitive **Tether** app and user-friendly web interface will help you set up the Archer AX10 in just minutes. Additionally, the Tether app allows you to manage your network settings from any Android or iOS device.
