Full product description

Gigabit Wireless Router

TP-Link Archer C2 is a wireless **Dual Band** router working in a new generation 802.11ac standard. The device allows you to simultaneously broadcast a wireless network at **450 Mbps in the 2.4 GHz band and 433 Mb/s in 5 GHz band**. Three external antennas provide long range and high performance connections, and the presence of **gigabit LAN ports** provides high speed wired transmission. **Archer C2 AC750** is one of the most cost-effective routers available on the market.

High wireless transmission speed

Router TP-Link Archer C2, supporting **802.11ac** connections, sends data at a speed 3 times faster than in the previously available **802.11n**, and users can create a fast and a reliable home network that supports multiple devices simultaneously.

Two-band smooth running

Router TP-Link Archer C2 broadcasts 2 separate wireless networks in the **2.4 GHz and 5 GHz** bands, providing high performance wireless connectivity and stable signal, so you can easily use wireless networks even in the most demanding applications.

Archer C2 router - stable wireless connections

Equipped with three high quality external antennas, the **Archer C2 AC750** router transmits a stable wireless network with speed is sufficient for a large home or office.

Instantaneous gigabit wired connections

With a **gigabit WAN port and four Gigabit LAN ports** the speed of wired connections is up to 10 times faster than with traditional Ethernet connections. **Archer C2** has enough power to maintain a stable transmission speed in two bands. Besides the guest network, parental control and IPv6 support, all this makes **TP-Link Archer C2 AC750** one of the leading wireless routers on the market.
