Full product description

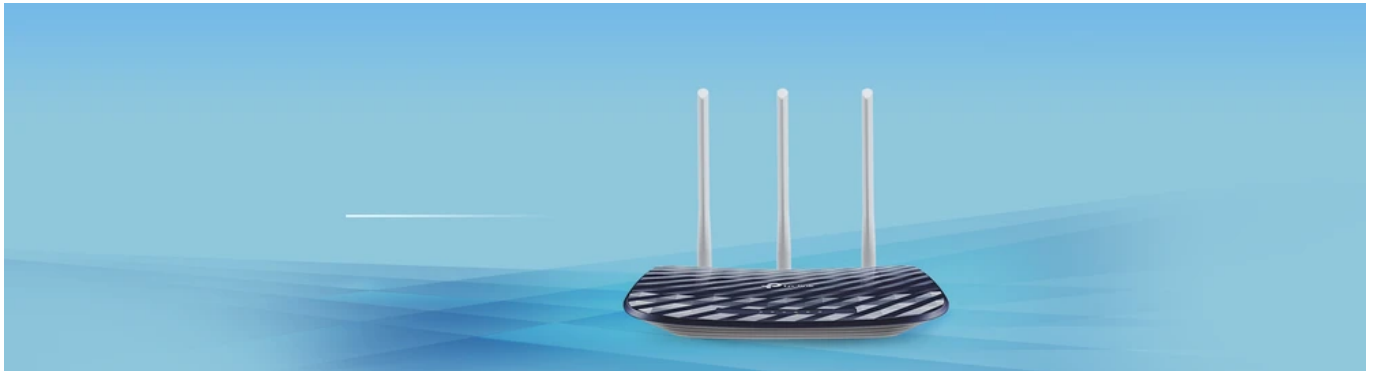

Dual Band wireless router

TP-Link Archer C20 is a **double-band wireless router** supporting the new generation of **802.11ac** wireless connections. The device allows you to simultaneously broadcast a wireless network with a speed of **300 Mb/s** in the **2.4 GHz** band and a speed of **450 Mb/s** in the **5 GHz** band. Three external omnidirectional antennas guarantee excellent range and network performance.

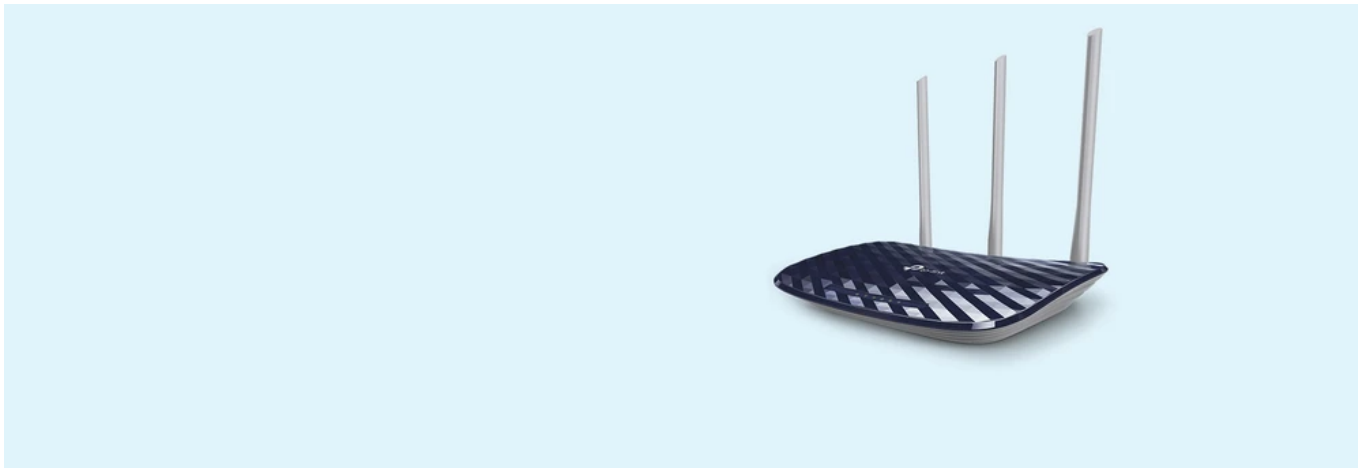

The new generation of wireless connections

The **Archer C20** TP-Link wireless router supports advanced **802.11ac** wireless connections, increasing the speed compared to older **802.11n** connections available so far. The high performance and security of the presented router is a guarantee of creating a fast and reliable home network supporting multiple devices at the same time.

750 Mbps - smooth running without interruption

The Archer C20 Wi-Fi Router broadcasts two separate wireless networks, one with a speed **433 Mb/s** in the **5 GHz** band and a second one with a speed **300 Mb/s** in the **2.4 GHz** band. This allows you to use two dedicated wireless networks simultaneously. The **2.4 GHz** connection is ideal for everyday, less demanding applications such as email or web browsing, and the **5 GHz** band is best suited for more demanding, delay-sensitive applications such as HD video streaming or online games.

Simple configuration

Intuitive interface allows for quick and easy router configuration. You can also configure it on your smartphone by downloading an intuitive **TP-Link Tether** application available for devices with [Android](#) or [iOS](#).
