Full product description

Wireless router with VDSL/ADSL modem

TP-Link Archer VR400 is a wireless router with a **VDSL/ADSL** modem that allows simultaneous broadcast of a wireless network at **300 Mbps** in the **2.4 GHz** band and networks at **867 Mbps** in the **5 GHz** band. The device is equipped with three dual-band antennas, which provide excellent range and a stable wireless network. The beam shaping technology guarantees high stability of connections. **The USB port** is used to operate e.g. printers or 3G/4G modems.

Super-fast Wi-Fi

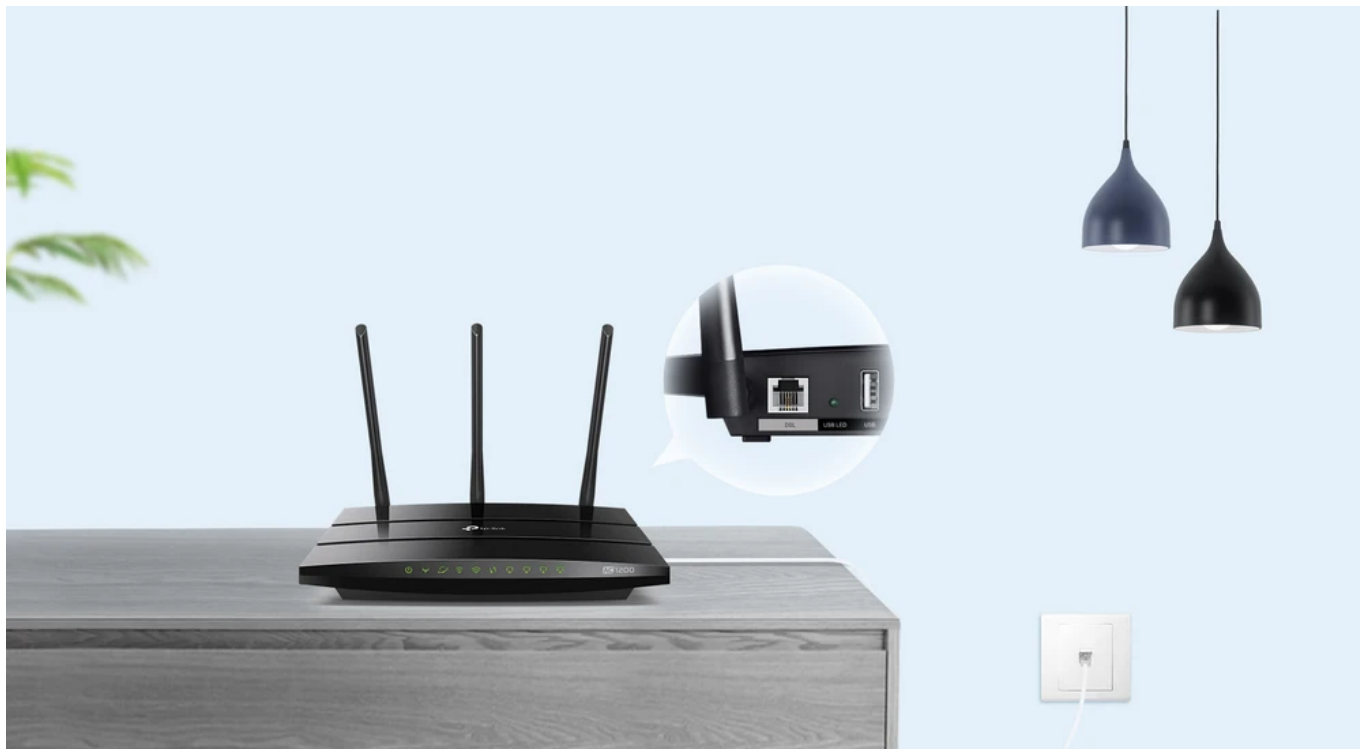

Unlock the full potential of your Internet connection with the Archer VR400 and Wi-Fi speeds that reach a total of **1.2 Gb/s**, 300 Mb/s in the 2.4 GHz band and 867 Mb/s in the 5 GHz band.

Two wireless networks allow you to support more devices and reduce interference to a minimum.

High-speed VDSL connections

The latest **VDSL2** technology used in the Archer router allows to achieve impressive **VDSL** speeds, even up to **100 Mb/s**, which is almost 5 times faster than the standard **ADSL2+**. Archer VR400 combines the functionality of two devices in one and can work as an ADSL router or regular wireless router. The ADSL port supports all available standards such as VDSL2, ADSL2+, ADSL2 and ADSL.

Excellent Wi-Fi coverage - many possibilities

Archer VR400 is equipped with ADSL modem, EWAN port and USB ports supporting 3G/4G modems, so the router does not limit your ability to choose the best service provider or change it if necessary. Three external antennas ensure stable connection in every corner of the house.

Simple configuration

With the intuitive **Tether** application you can configure your router in just a few minutes. The application also allows you to control TP-Link Archer VR400 using an [Android](#) or [iOS](#) device.
