Full product description

TP-LINK CAP300

TP-LINK CAP300 is a sure choice if your priority is to have a secure and stable network at home or in the office. This device works with Auranet wireless controllers and allows you to create scalable solutions that **increase your WiFi speed**. In terms of security this access point uses effective security protocols such as **WEP, WPA or WPA2-Enterprise**.

N 300 Mbps Wireless Access Point for Ceiling Mounting

The hardware controller allows administrators **to manage hundreds of CAPs at ease**

Support for PoE (802.af) technology for convenient and inexpensive installation

Easy to mount for easy wall or ceiling mounting

The interception portal provides a convenient method of authentication for Wi-Fi guests

Enterprise-class Wi-Fi security helps reduce security risks

Multi-SSID divides several wireless networks into different types of users

FAT/FIT switchable mode (central / standalone control)

Discreet design and easy installation

The cover of the CAP controllers allows **easy and quick wall or ceiling mounting**, and thanks to power **over Ethernet (PoE)** cable or external 9V source, their placement is flexible and trouble-free. The controllers have an elegant and sophisticated design, ensuring that TP-Link CAP series access points blend discreetly into virtually any interior style.
