Full product description

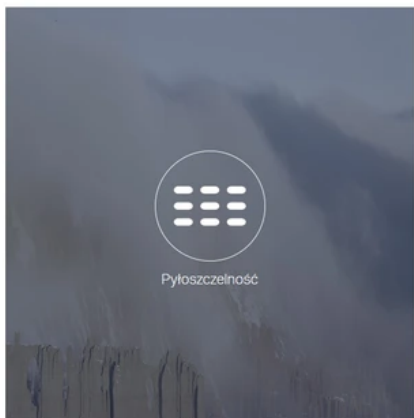

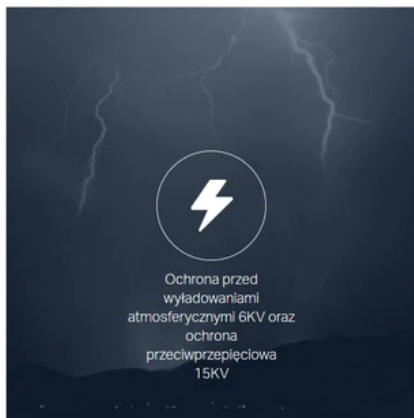

TP-Link Outdoor Access Point

TP-Link CAP300-Outdoor is a **wireless access point** designed for outdoor use and optimized for long-distance transmission. The device supports **PoE** (IEEE 802.3af) power supply, is weather resistant and has business-class security.

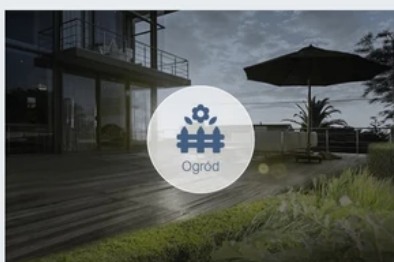

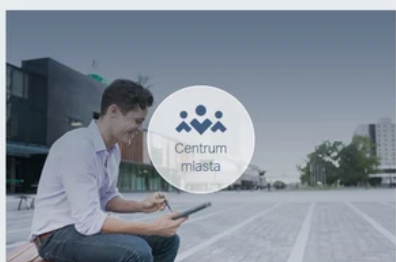

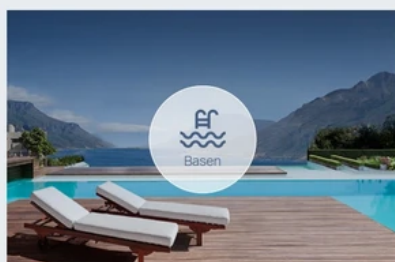

Watertight housing with IP65 certification

CAP300 - outdoor is **IP65** certified, which guarantees that the access point will withstand even the harshest weather conditions.

Long distance data transmission

High transmission power and two powerful omnidirectional antennas make the CAP300-Outdoor provide a stable wireless network with a range up to 200 meters.

FIT/FAT operation mode

The device has two modes **FIT** and **FAT**. The first one allows you to manage hundreds of access points simultaneously using Auranet wireless controllers, while FAT mode allows you to manage each access point separately using the network interface.
