Full product description

Deco E3 by TP-LINK - dual-band Mesh Wi-Fi system

TP-Link Deco E3 is the easiest way to guarantee a strong Wi-Fi signal in every corner of your home. This system provides fast and stable Wi-Fi connection to a range of devices in any room of the house. If you're tired of lagging downloads or losing internet connection, choose **Deco E3** with guaranteed seamless Wi-Fi coverage. This home Mesh system supports up to **100 Wi-Fi devices and up to three times faster wireless speeds compared to previous generation routers**. Deco units work together as a unified network, so you can enjoy faster speeds throughout your home without having to jump between networks.

Effective elimination of weak signal areas

The two-unit system can cover an area of **up to 220 m²**, and you can enjoy uninterrupted connections in every corner of your home. If you need even greater coverage, simply add another Deco router to your network.

No more long term caching!

The MESH system has a significant advantage - the devices automatically connect to the fastest Deco unit in your home. You move freely throughout your home, with a perfect signal at all times, because your end device connects to the Deco router that is currently sending the best Wi-Fi signal, guaranteeing a seamless and fast internet connection. The system automatically selects the correct frequency on your device, whether you are operating in the 2.4 GHz or 5 GHz band.

Three times the network speed

The **TP-Link Deco E3** offers up to three times faster network speeds than previous generation routers, using **802.11ac** technology and two bands during operation. It **reaches speeds of 867 Mbps in the 5 GHz band and 300 Mbps in the 2.4 GHz band**. Up to 100 devices can be connected to the unit without any speed limit. This ensures smooth gaming and 4K video playback.

Wi-Fi Mesh System - easy to set up and expand

Installing the TP-Link Deco E3 Mesh system is very simple. **Just install the TP-Link Deco application and follow the on-screen instructions.** After a few minutes, your network will be ready to go. **You can extend the range of your Mesh Wi-Fi network at any time by simply plugging in another Deco router using the app.**
