Full product description

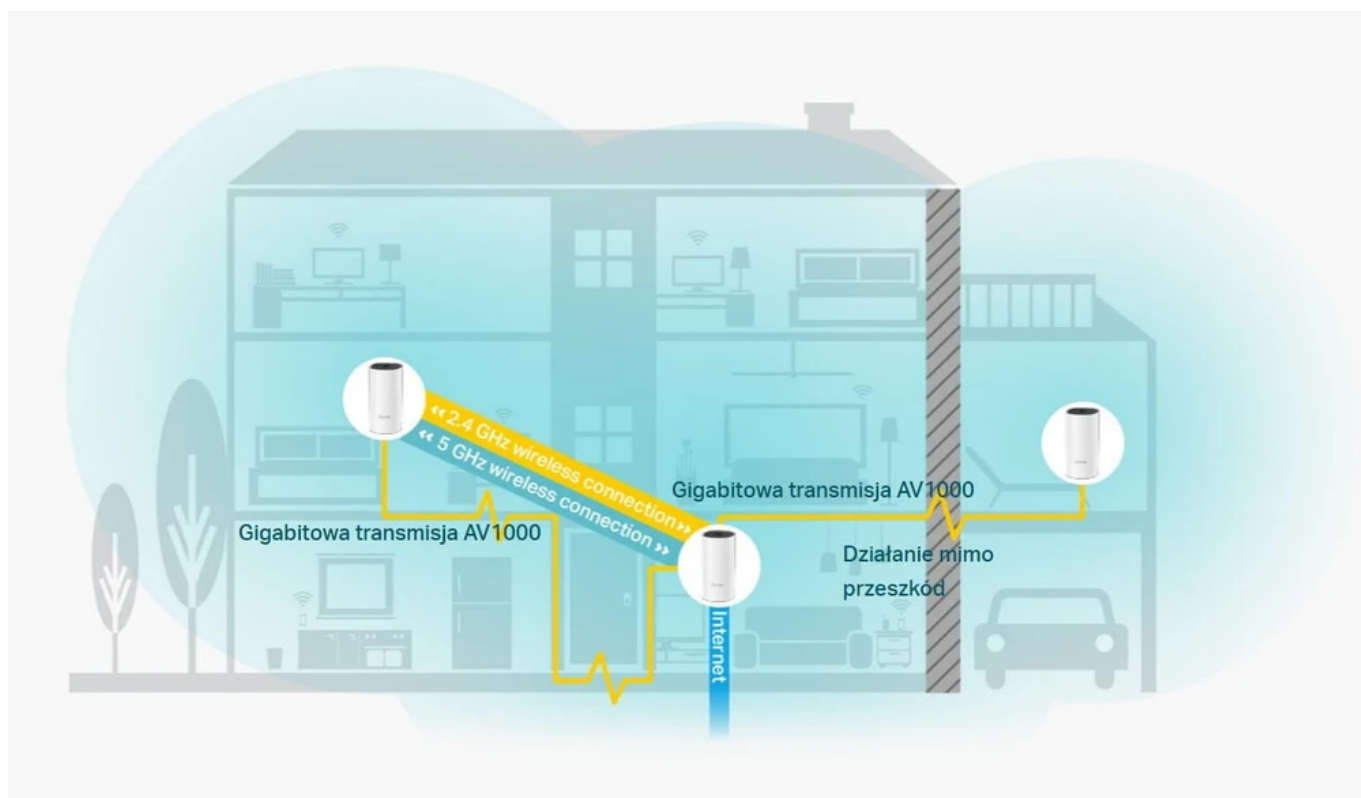

Home Hybrid Wi-Fi Mesh AC1200 AV1000 System

The **TP-Link Deco P9** is a mesh Wi-Fi system with data rates of up to **867 Mbps in the 5 GHz band and up to 300 Mbps in the 2.4 GHz band**, which also supports inter-module data rates of up to **1000 Mbps** using the Powerline standard. **The Powerline standard** enables the use of electrical wiring to create a more robust mesh network between modules and create truly seamless coverage.

High speeds thanks to hybrid technology

Simultaneous **Powerline and Wi-Fi** support **allows the Deco P9** to provide higher overall network transfer speeds, as well as more reliable coverage over a wide area - by better overcoming obstacles like thick walls. A set of two modules **can cover up to 560 square meters**.

Excellent features and technology

Each **Deco P9 module** features a Qualcomm chipset, two Gigabit Ethernet ports with WAN/LAN auto-sensing, and two built-in dual-band antennas. **TP-Link Deco P9** modules can operate in both router and access point modes and support wireless technologies such as **TP-Link Mesh**, MU-MIMO, Beamforming, Band Steering, Auto Path selection and Self-Healing. **The TP-Link Deco P9 system** can **connect up to 100 wireless clients**, and can combine with other Deco models to form one cohesive Mesh network with a single Wi-Fi name.

Koniec buforowania

Dzięki technologii 802.11ac i prędkościom nawet trzy razy szybszym niż w starszych generacjach routerów, Deco może zapewnić szybkie połączenia bez opóźnień nawet dla 100 urządzeń.
