Full product description

TP-Link EAP220 - wireless Gigabit N-standard access point

TP-Link EAP220 is a **wireless, Gigabit Ethernet access point** operating in N standard. It operates at two frequencies and wireless transmission speed is up to 600 Mbps. Thanks to its modern and unconventional design, the EAP220 will fit into any environment, and the **poE** power supply will allow installation without the use of additional cables. As a wireless access point TP-Link EAP220 will be a perfect solution for networks of such places as: schools, hotels, university campuses.

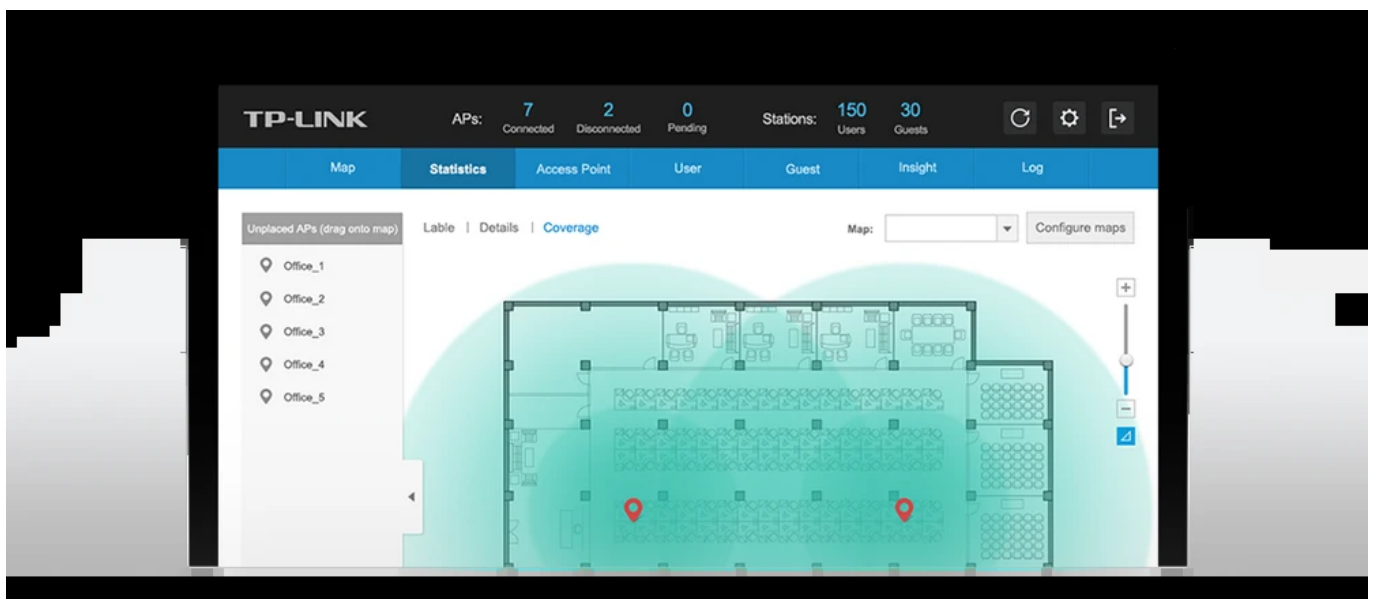

Welcome page

Authorization of wireless users via the **welcome page** is extremely convenient. This method requires the user to take appropriate actions, i.e. to approve the terms of use or to log in to the system in order to gain access to the network. These actions are then verified by a special server or database **administrator**.

Wireless network management software

The **EAP Controller Software** allows simultaneous **configuration of the network** and **management of multiple EAP220 devices**. Thanks to its features it guarantees real-time monitoring, graphical analysis of network traffic and simultaneous software updates on many devices.

High power wireless device

- EAP devices use Wi-Fi 802.11n and 2x2 MIMO technology
- The EAP220 has the ability to support two bands simultaneously, 2.4 and 5 GHz, for wireless speeds up to 600 Mbps
- EAP device with Qualcomm Atheros 560 MHz chipsets provides incredible network coverage and reliability
- Gigabit Ethernet port for fast Internet speeds
