Full product description

TP-Link L530E smart bulb

The **TP-Link L530E** is one of the most adaptive and energy-efficient smart multicolor Wi-Fi light bulbs. **The L530E bulb** offers a wide range of features depending on your needs, such as LED lighting, voice control, easy setup, scheduling and timer, as well as an energy-efficient E27 socket. With **LED lighting**, you can choose from 16 million different colors to create a personalized lighting atmosphere in your home.

A light for every situation

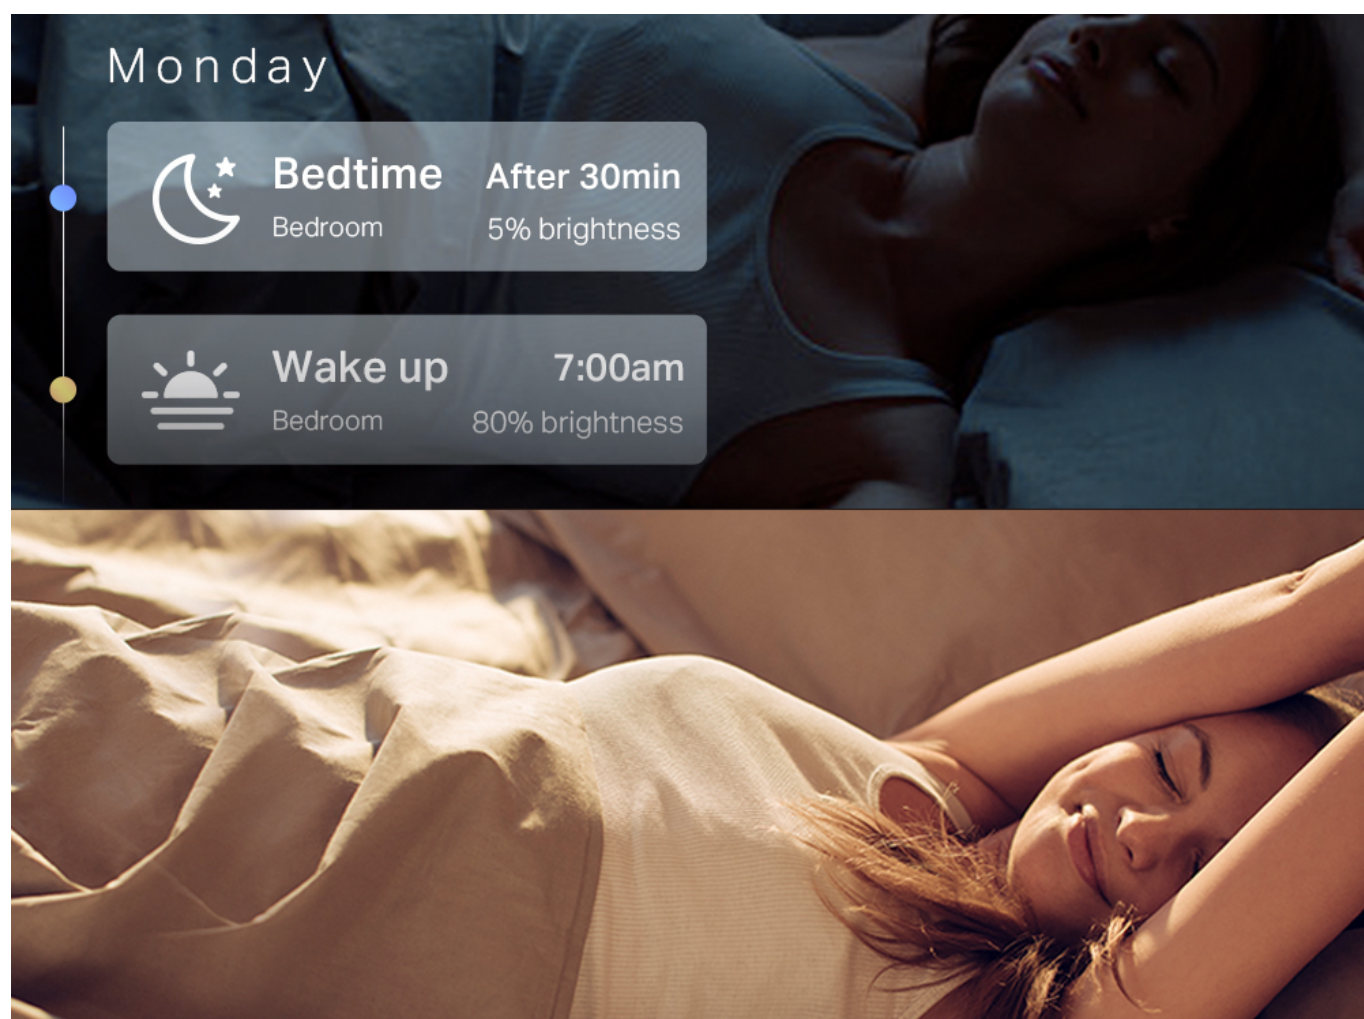

With 16 million shades and the ability to adjust the brightness of the light, **the smart bulb** can easily adapt to any mood or atmosphere. This is made possible by LED technology, which provides high-quality, uniform light with accurate color reproduction and a wide range of shades. Enjoy maximum flexibility with the **TP-Link L530E** - the perfect choice for those looking for a versatile light source that can be customized.

Simple configuration

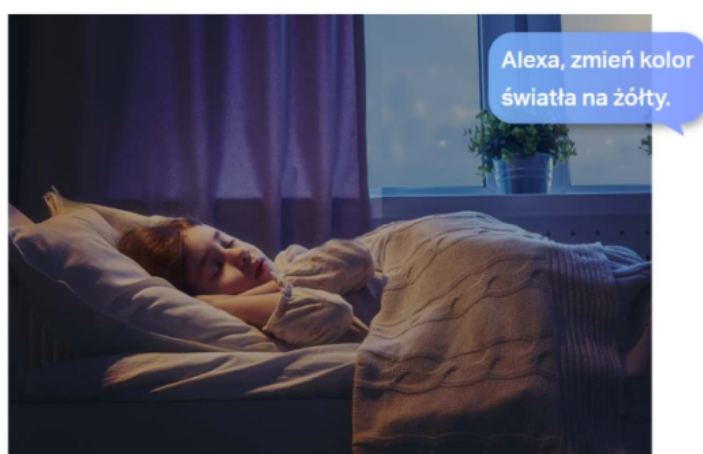

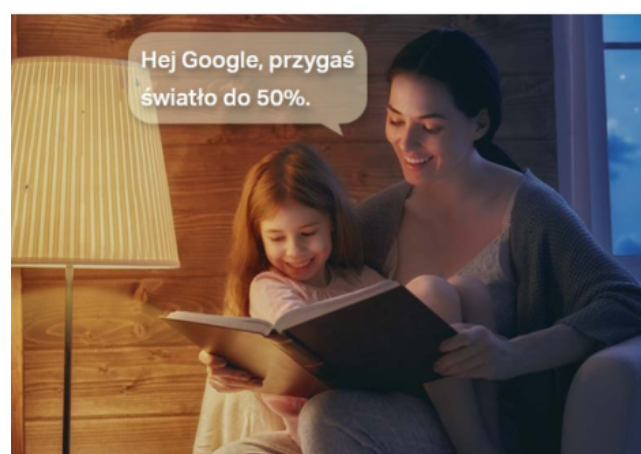

The simple configuration of the **TP-Link L530E** light bulb allows you to program the light to turn on or off at a specific time of day with adjustable brightness. This is especially useful in the morning when you want to gradually ease your awakening. With **the built-in timer**, you

can also adjust the sleep mode, which attenuates the light at night to help you sleep better.

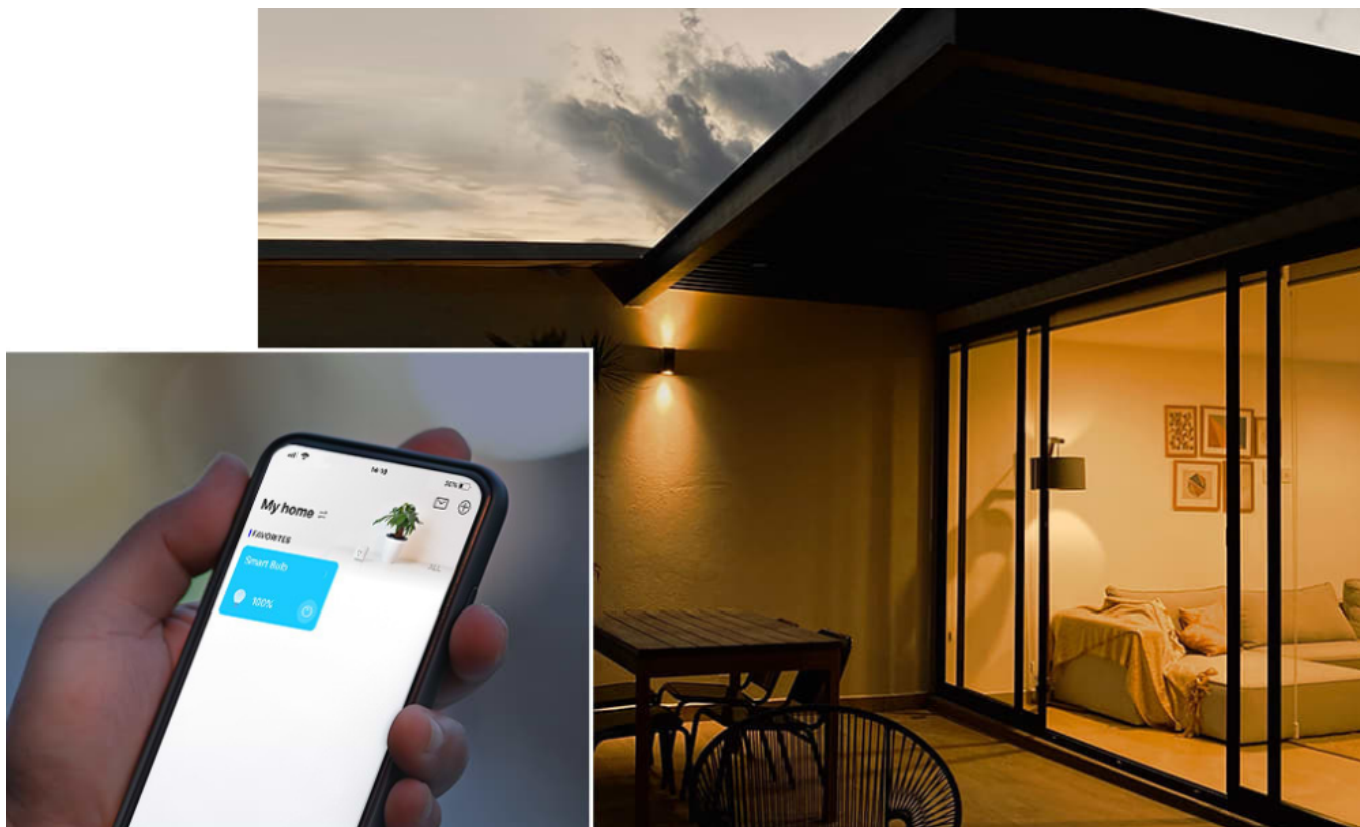

Voice control

Voice control is becoming an increasingly popular way to interact with technology. With the **TP-Link L530E**, you can use voice control to make your life easier. Simply say "OK, Google," and your assistant will be ready to help you turn the lights on or off.

Remote control

Using your smartphone or tablet, simply open the **Tapo** app and connect to the **TP-Link L530E** bulb for one-touch control. With the app, you can adjust the light temperature of the bulb, turn it on and off without getting up from the couch. In addition, in the Tapo app, you can set a schedule or timer to have the LED bulb turn on automatically when needed.

Out-of-Home Mode

The **TP-Link L530E** has a convenient **Outside** the Home mode that can be used when no one is home. This mode periodically turns the lamp on and off, at random times - this way, people standing outside will have the impression that someone is present in the house.
