Full product description

Omada hardware controller

The OC200 controller is specifically designed to provide centralized management of Omada networks. The device can monitor real-time statistics, view graphical analysis of network traffic, create an access portal, perform system upgrades and reboots, or easily scale the network to match your business growth.

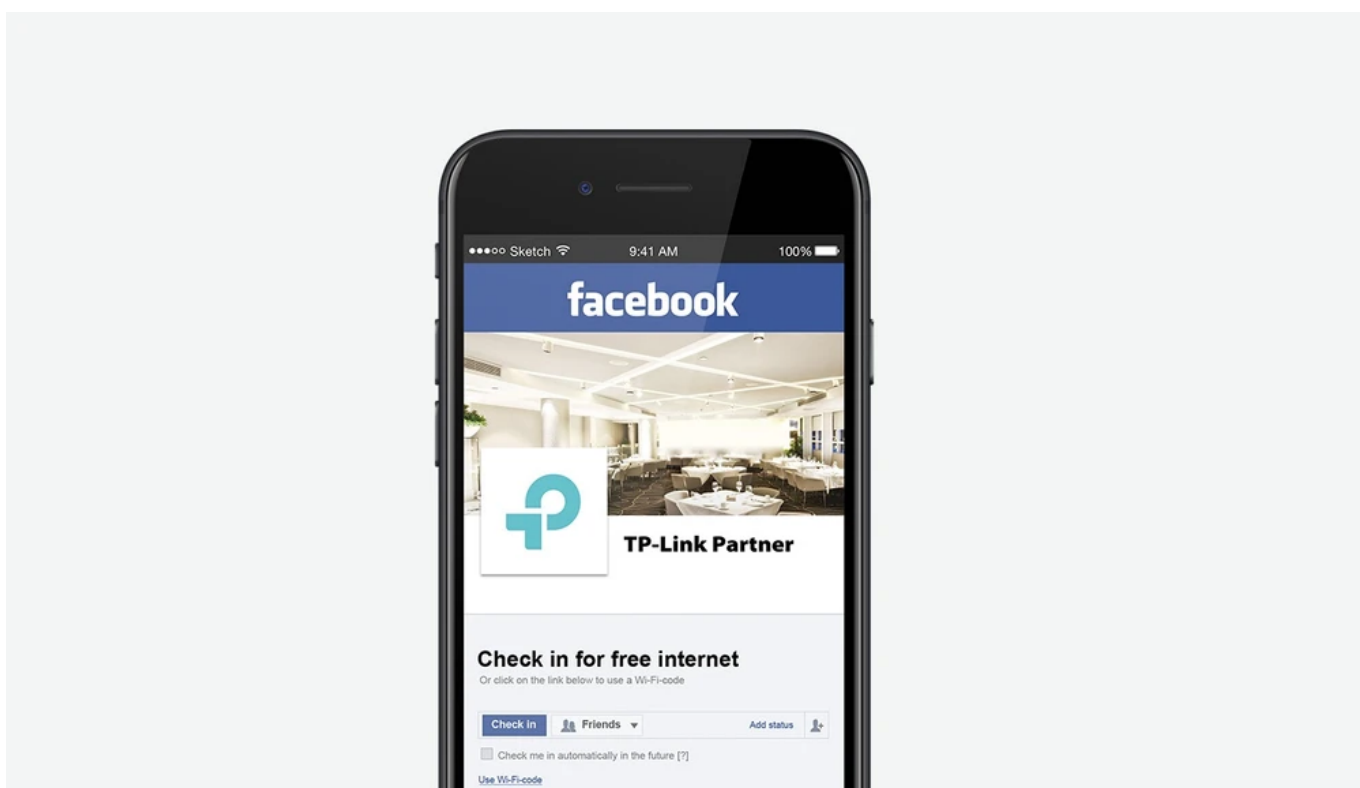

Free management in the cloud - anytime, anywhere

Omada offers free cloud access with its own platform for centralized management. Take your network with you wherever you go.

Guest network with Wi-Fi login via Facebook and SMS

Visitors have access to a secure Wi-Fi network with a captive portal and separate wireless network technology. **Newly added SMS authentication simplifies the connection process** and Facebook login adds value to your company's social networking profile.

Even more convenient control with the Omada mobile app

You can access the **OC200** cloud controller from anywhere in the world and configure everything conveniently. All you need is a smartphone with the Omada mobile app.
