Full product description

OC300 - Omada hardware controller

TP-Link Omada Controller OC300 is a network infrastructure controller that provides automatic discovery, centralized management and monitoring of **Omada** network devices such as Wi-Fi access points, switches and routers. The device supports up to **500 network devices and up to 15,000 client devices**. The controller supports hotspot access points with authentication via temporary access vouchers, SMS messages, social network profiles, with Captive Portal support.

Hybrid cloud for maximum convenience

Equipped with hybrid cloud technology, the Omada OC300 controller allows you to remotely control your entire network from anywhere in the world. **Locally manage your devices with the highest level of security and stability.**

Greater convenience with the Omada app

Remotely access and configure your entire network with the touch of a phone from anywhere in the world.
