Full product description

Gigabit Smart JetStream switch - the professional solution for small and medium-sized businesses

Gigabit Smart JetStream T1600G-28TS switch from TP-LINK is equipped with 24 Gigabit RJ45 ports and 4 SFP slots. The switch provides **high data transfer performance** and powerful second layer traffic management functions. The JetStream T1600G-28TS is a cost-effective solution for small and medium businesses. The product has useful security features such as Storm Control, which protects against the phenomenon of broadcast storm of Broadcast, Multicast and Unicast packages. Easy command line or web browser management and SNMP and RMON support allow quick configuration and reduced downtime. The T1600G-28TS is the ideal solution for departments and workgroups that need economical, high-speed edge switches.

Extensive second layer configuration

The T1600G-28TS has a number of features such as VLAN 802.1Q, port isolation, port mirroring, STP/ RSTP/ MSTP, port aggregation, and 802.3x flow control, which provide many possible applications in the second layer. The device also has numerous maintenance functions, e.g. cable diagnostics, loop back detection and IGMP snooping, which enables intelligent transmission of multicast streams only to specific subscribers. IGMP throttling and IGMP filtering, on the other hand, will effectively restrict access to multicast transmissions for unauthorized users.

QoS function and IPv6 support

Simultaneous and smooth voice, video or data transmissions are ensured by the extensive QoS features. To ensure smooth data transmission, the administrator can set priorities based on the 802.1P and DSCP protocols. **T1600G-18TS** supports many IPv6 features such as dual IPv4/IPv6 stack, MLD Snooping, PMTU Discovery and IPv6 Neighbor Discovery.

TP-Link T1600G-28TS offers a wide range of products:

- Extensive network traffic security features including support for VLAN 802.1Q, Port Security and Storm Control for effective local network security
- Optimise voice or video transmission with QoS (L2/ L3/ L4) and IGMP snooping
- IPv6 support with dual stack IPv4/IPv6 and MLD snooping capability
- Convenient command line or web browser management and SNMP and RMON support
- Gigabit ports for full data transmission speed
- Layer 2+ static routing function to increase network performance
