Full product description

TP-Link MR3020 - 3G 4G LTE - travel wireless router

TP-Link TL-MR3020 is the ideal travel companion. The **TP-Link** wireless router is powered by a laptop or external power supply and allows you to share a mobile **3G** connection wherever a 3G network is available. Compatibility with these (3G) modems makes the router a great solution for devices such as **iPads™**, **iPhones™**, **Android™** phones, **Kindle™** readers and other portable wireless devices.

Compatibility with all modems on the market

TP-Link realizes that compatibility is the most important feature of mobile routers, so it makes every effort to make their devices compatible with all modems available on the market. TL MR3020 router is similar in size to a credit card, making it an ideal solution for every journey.

Fast setup and secure connection

TP-Link wireless router is extremely easy to configure. Simply connect the USB modem to the router, select the name of the network and establish the connection. The set comes with an instruction manual that will help everyone to connect the device. Thanks to the network security function we can be sure that no unwanted user will connect to the network. All you have to do is press the **"WPS"** button, which will establish a **WPA2** connection, which is much safer than **WEP** encryption.

Features of TP-Link MR3020:

- Compatibility with LTE modems (PLUS, POLSAT) after downloading the latest firmware version (available in support)
- 3G/4G mobile connection sharing, tested compatibility with over 120 USB LTE/UMTS/HSPA/EVDO modem models
- Miniature size and weight allow you to take the router on the go and easily share the connection anywhere within 3G network coverage
- Transmission speed up to 150 Mb/s
- Three operating modes for three different applications: 3G router, WISP client and travel router (AP mode)
- Configurable 3G/WAN back-up connection TL-MR3020 allows you to maintain the connection in case of main connection failure
