Full product description

TP-LINK TL-MR3220

TP-Link TL-MR3220 offers an easy and fast way of wireless Internet access for homes or small businesses. Equipped with **3G/4G modem**, the **fast 802.11n protocol** can serve as a **wireless access point or router** with a maximum transmission speed of up to **150Mbps**, which is enough for even more demanding activities such as **streaming HD video, VoIP telephony or playing online games**.

Share your 4G freedom!

The TL-MR3220 allows you to share your LTE broadband connection with your family or friends wherever mobile coverage is available. You can **instantly create a Wi-Fi hotspot by connecting a USB UMTS/HSPA/LTE modem to the router slot**. The TL-MR3220 has a **4G/WAN failover function** so you can stay online at all times. LTE routers from TP-LINK offer users a choice of 4G or WAN connection, where competing products offer only one or the other.

150 Mbps in N standard and better coverage

Compatible with **IEEE 802.11n** standard, TP-Link TL-MR3220 can establish wireless network with transmission speed up to **150 Mb/s** and minimize data loss over long distances. In addition, **users can easily receive wireless signal from the router over longer distances than in the case of previous 11g products.**
