Full product description

TP-Link Power over Ethernet adapter kit

TL-POE200 is a **PoE Injector and Splitter PoE** kit that allows you to extend your network coverage by providing data transmission and power over a single network cable. The devices are **Plug and Play** and do not require configuration.

Provide power to your devices on one mains cable

The kit consists of an **Injector** supplying power and transmitting data over a single Ethernet cable and a **splitter** dividing it back into two cables for use by network devices. This allows for a **easy and convenient** installation of devices such as **IP phones, IP cameras** or **access points**. Thanks to such a solution there is no need to put additional power cables to the devices.

Widely used PoE technology

The set is equipped with 4 RJ45 10/100 Mbps ports, a 48VDC input power port and a 12/9/5VDC output power port. The device is equipped with such functions as **automatically negotiated connection speed** and **automatic crossover (Auto MDI/MDIX)**. The set allows you to reduce the cost of equipment operation by using PoE technology.
