Full product description

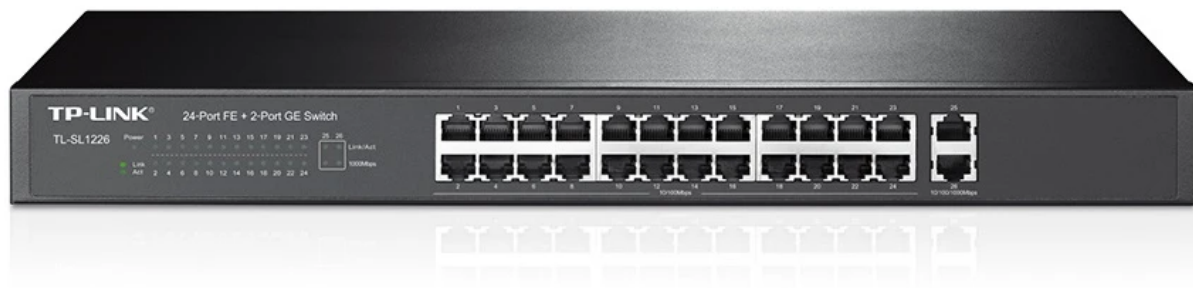

Fast Ethernet switch

TL-SL1226 is a **network switch** equipped with **24 RJ45 10/100M** ports and **2 RJ-45 10/100/1000M** uplink ports. Each port of the device has an advanced **auto negotiation** function of connection speed and **auto-MDI/MDIX** automatic crossover. **TL-SL1226** is a cost-effective high-performance device that allows you to connect your existing network to a gigabit network environment. It enables more efficient work groups, better bandwidth utilization and provides the possibility of easy network expansion. Moreover, the equipment is equipped with **Green Ethernet** technology, thanks to which we can save up to 50% of energy.

Environmental protection

As a next-generation **TL-SL1226** switch, it uses a technology that allows you to increase network capacity with high energy savings. The equipment automatically adjusts power consumption depending on the connection status and cable length, taking care of environmental protection. Moreover, the device complies with the European Directive **RoHS**, limiting the use of equipment made of environmentally hazardous materials.

Plug and Play

When connected, the device automatically starts working. There is no need to configure it in advance. All switch ports have automatic negotiation of connection speed and automatic crossover function (Auto-MDI/MDIX).
