Full product description

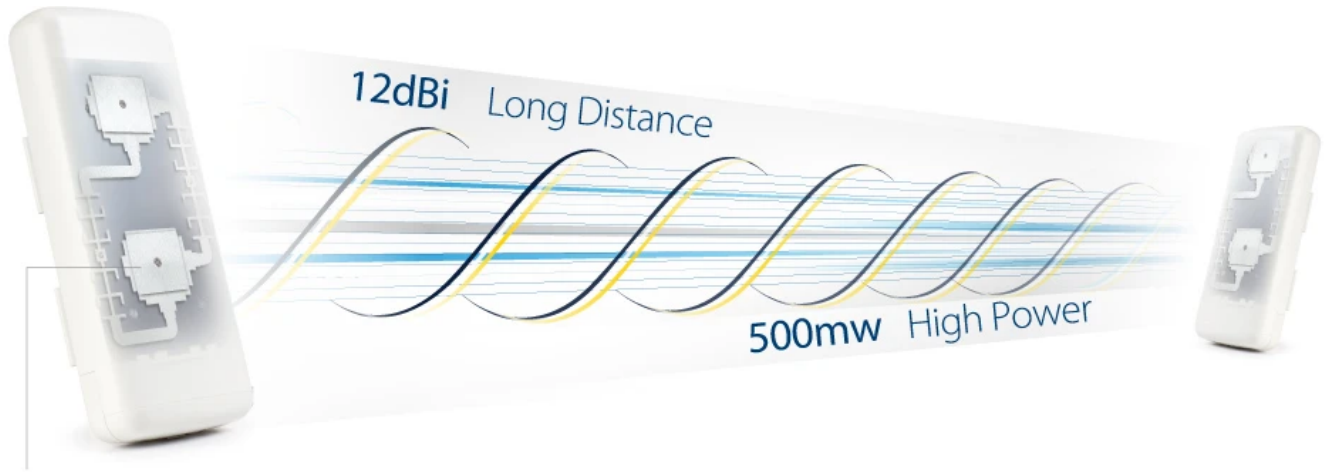

Wireless external access point

TP-LINK TL-WA7210N is an external, **wireless access point**, which has a double-polarized antenna with power **12 dBi** enabling wireless connections over longer distances. The access point complies with **IEEE 802.11b/g/n** standards and achieves a wireless transmission speed of up to 150 Mbps. The device is equipped with a waterproof housing, which also provides protection against lightning and electrostatic discharge. Access Point **TP-LINK High Power TL-WA7210N** is dedicated to **WISP CPE** solutions and long-distance networks.

Soline transmission power

The transmission power **TL-WA7210N** of **500 mW** guarantees a strong, robust signal at long distances. It can be adjusted depending on the type of wireless point-to-point or point-to-multipoint connection.

TL-WA7510N - designed for tough conditions

TL-WA7510N has been designed to work even in the most unfavourable climate conditions. The device is compatible with **Passive PoE** and thus belongs to the group of multifunctional network solutions.

Intelligent management tools

Access point has useful management tools, such as: - antenna setting tool to determine the most appropriate direction of wireless transmission - the **ACK timeout** parameter measuring tool, which allows you to set the distance between two access points in such a way as to get the best wireless connection. - Tools **Ping Watch Dog**, where by setting a few simple parameters the user can use the ping command to check the quality of the wireless connection and reboot the remote access point if the signal is weak or negligible.
