Full product description

750Mbps in two bands for demanding office and home tasks

TP-LINK is performance-optimized dual-band wireless router. The device enables simultaneous use of high speeds of **450 Mbps in 5 GHz band** and **300 Mbps using traditional 2.4 GHz band**. Thanks to the **NAT** mechanism, the TL-WDR4300 offers very high **bandwidth between WAN and LAN - over 800Mbps**, and **two USB ports** allow file and printer sharing.

Simultaneous operation of the 2.4 and 5 GHz bands

The advantage of simultaneous operation of both bands is the ability to split the network. Simple tasks such as email and web browsing operate in **the 2.4 GHz band at 300 Mbps**, while bandwidth-hungry tasks such as online gaming or HD video streaming use the **5 GHz band at speeds of up to 450 Mbps** without transmission delays.

Easy file and printer sharing

The TL-WDR4300 has two multifunctional USB 2.0 ports, allowing users to share files, media or printers between multiple computers connected in a home network. The router also provides remote access to files via FTP server functions over the Internet.

Extremely fast wired connections

The TL-WDR4300 features a Gigabit WAN port and four Gigabit LAN ports, providing a robust and extremely fast cable network ideal for demanding applications and activities such as online gaming or HD streaming. The **NAT bandwidth** between the WAN and LAN ports for this device is **800 Mbps**, allowing its users to take advantage of its full potential.
