Full product description

A set of TP-Link network transmitters

TL-WPA4220KIT is a **set of network transmitters** using our home power supply network for fast data transfer without pulling new wires. The device has **Plug and Play** functions and does not require configuration, just plug it into a power outlet. The transmission speed of the transmitter is **500 Mb/s**, which enables e.g. smooth transmission of video games or UHD quality movies.

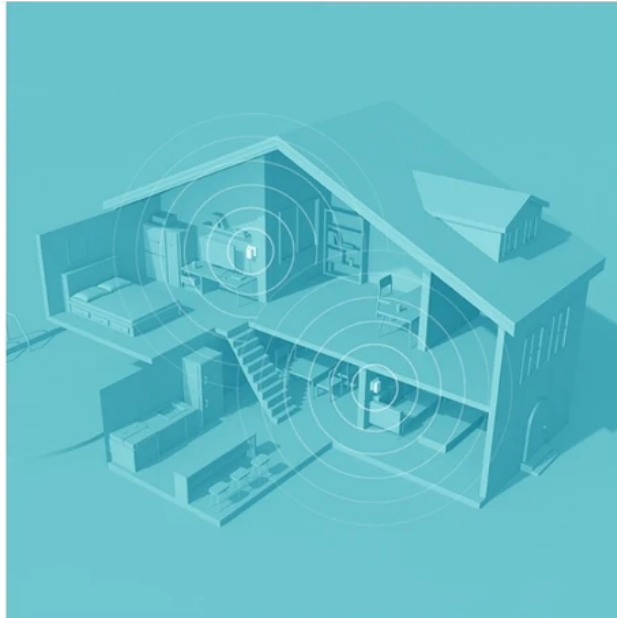

Stable wireless connections

Using the **Wi-Fi Clone** button, you will automatically copy the name and password of the home router's wireless network. Then connect the device at the destination point and from now on you can use the network access, anywhere in the house.

Better performance

Now you can extend the range of your wireless network and enjoy network access in the basement, attic or garage. Simply connect your device to the location of your choice and the network signal will be distributed over the electrical cables that are found in every home.

One network across the house

Thanks to TL-WPA4220KIT there is no longer any need to buy several Wi-Fi routers and install cables to them, and the **TP-Link tpPLC** application, available for devices with [iOS](#) and [Android](#), will help you configure the transmitter according to your needs.
