Full product description

TL-WR741ND router - wireless router with N standard

Router TP-Link TL-WR741ND combines the function of a 4-port switch with the function of a router enabling Wired and wireless connection and Internet access sharing. The device operates in accordance with **802.11b and g** standards. Based on **802.11n** technology, it provides high performance connections and transmission speed of **150 Mb/s**. The 11n technology (an upgraded version of the 11g standard) increases data transfer rate and is used in applications requiring high bandwidth, such as video transfer. Excellent range of the router guarantees access to wireless network from any place in the house. In comparison with 11g standard products, the TL-WR741ND provides better quality of video transfer, VoIP and online gaming.

High-speed network device

The **IEEE 802.11b/g/n** router standards ensure high network performance and therefore savings. Based on N technology, the TP-LINK TL-WR741ND device ensures transmission speed up to **150 Mbps**, enabling transmission 9 times faster and 4 times longer range in comparison with 11g standard.

Stable wireless transmission

The **Clear Channel Assessment (CCA)** technology provides automatic selection of the optimal operating channel to avoid conflicts between channels and thus increase wireless transmission performance.
