Manufacturer: UBIQUITI

Referention number: DNXFENLSERMLH

Full product description

Precise GPS synchronisation

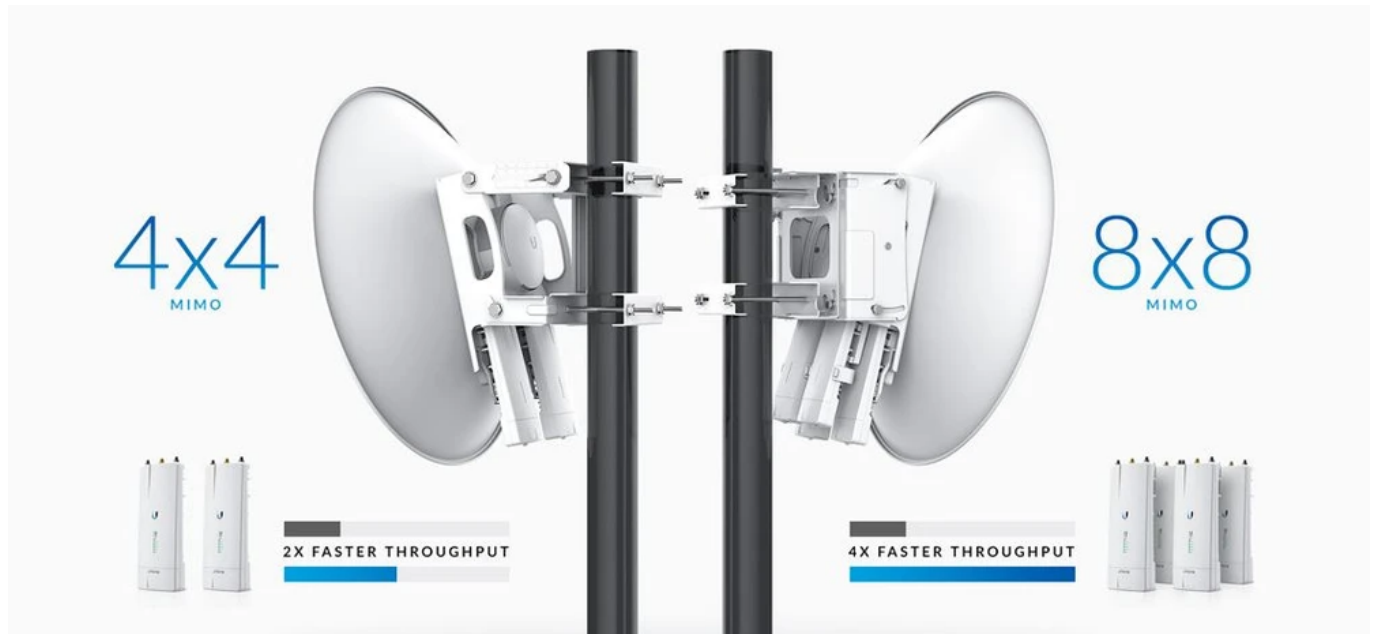

Using a common **GPS synchronization reference point**, airFiber X radios work consistently to provide powerful **multi-gigabit** bridge performance for **PtP** links.

Technology combines MIMO 4x4

Quick installation of many **airFiber X** radio devices on existing airFiber dish antennas for **Plug and Play** installation. You can use radio

channels of different sizes even adjacent channels without protective band and place them anywhere in the radio band.

Versatile installation

The **airFiber NxN** multiplexer can be connected to most airFiber X or RocketDish **5 GHz** antenna models. In case of any other antenna configuration you can mount the airFiber NxN multiplexer on a mast.

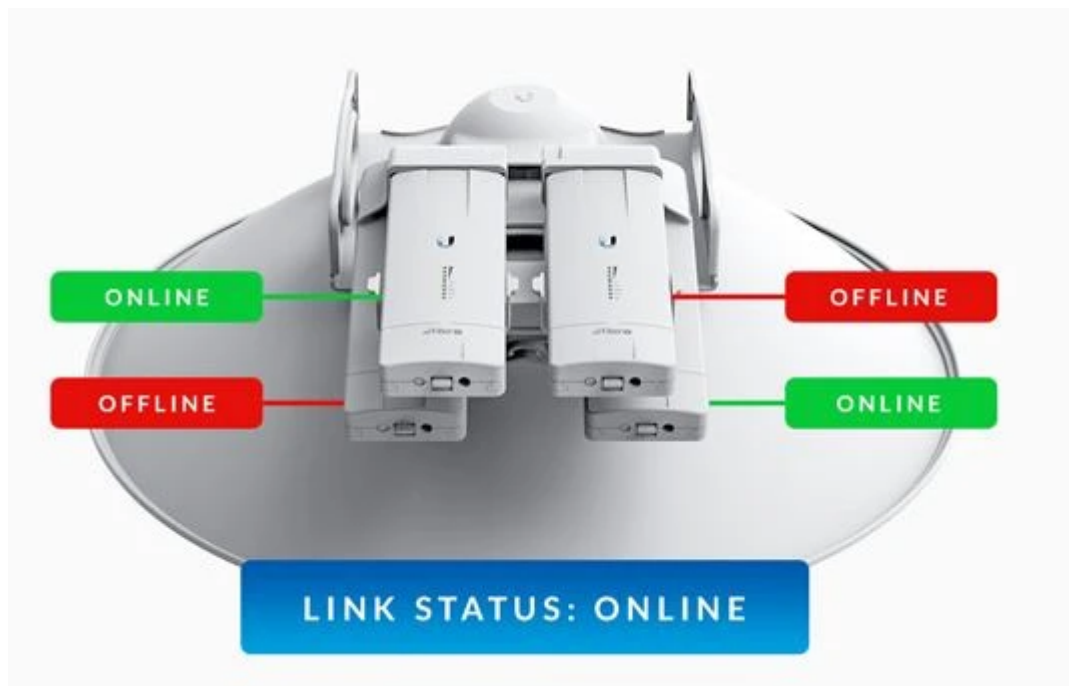

Reduced construction costs

Mounting multiple airFiber X radio transmitters on a single **antenna maximizes throughput** and capacity in a compact tower housing, **minimizing construction costs**.

True redundancy

Many airFiber X devices with multiple media on multiple frequency bands provide **the highest interference immunity** and link redundancy.

Connection to EdgePoint for highest performance

EdgePoint offers **advanced configuration features**, including radio link load balancing and advanced **fiber network implementation functionality**.
