Full product description

The WISP Intelligent Control Point with FiberProtect

EdgePoint™ offers an innovative combination of high routing performance, fiber optic backhaul capabilities and the convenience of passive PoE operation.

Breakthrough in the implementation of tower systems

EdgePoint is equipped with FiberProtect technology, which significantly reduces failures related to electrostatic discharges (**ESD**) and electromagnetic interference (**EMI**). It significantly improves data signal integrity and strengthens wired data back-up connections to a single fiber optic cable for long-distance connectivity.

Specially designed for WISP control

EdgePoint is the first application-specific designed **WISP** control point. EdgePoint combines advanced **EdgeMAX®** routing capabilities with fiber optic backhaul and universal powering capabilities.

All-in-one construction

A single, compact system eliminates clutter, expensive cabinets, external installations and excessive maintenance.
