Full product description

EdgeMAX ER-12 is a 10-port Gigabit router with PoE and 2 SFP ports

EdgeRouter™ 12 offers up to **3.4 million packets per second** at data rates up to **6.8 Gbps**. Ten Gigabit Ethernet ports provide Ethernet connectivity, while **the two SFP** ports offer fiber optic connectivity. EdgeRouter 12 supports layer 2 switching.

Universal design

EdgeRouter 12 can be mounted in a **19" Rack** using the EdgeRouter Rack Mount Kit, model ER-RMKIT (sold separately).

Centralised management

EdgeRouter 12 is operated and managed by **UNMS™** a comprehensive controller with an intuitive user interface. A single control system manages registered EdgeMAX® devices in multiple locations. Install UNMS application on your mobile device, connect to a wireless network that has access to EdgeRouter and log on to it. You can then view and configure various settings, such as interface information, throughput per port, and system settings.

Manage your network:

- Configure multiple DHCP servers to assign IP ranges in different subnets on different interfaces.
- Conveniently track your device's route and network activity from tools such as Ping, Trace, Discover and Log Monitor.
- Apply the rules to groups filtered by IP address, network address or port number.
- Network Interfaces (VLAN) for network segmentation.
- Configuration of static routes and dynamic routing protocols.

EdgeOS® is an advanced operating system with robust features:

- VLAN interfaces for network segmentation
- Static routes and protocol support: OSPF, RIP, BGP and MPLS
- Firewall and NAT rules
- Identification of applications with Deep Packet Inspection
- DHCP services
- Quality of Service (QoS)
- Network administration and monitoring tools
- Administrator and operator accounts
- Comprehensive IPv6 support
