Full product description

Ubiquiti LTU-LITE LTU CPE 5GHZ

LTU-Lite is a 5 GHz client device with built-in antenna designed for use as PtMP CPE, using Ubiquiti's own LTU technology. LTU technology breaks the limitations of Wi-Fi 802.11 and supports 1024 QAM for excellent performance. Channel width flexibility (10/20/30/40/50 MHz) allows for independent configuration of TX and RX channel frequencies anywhere in the radio band to avoid local interference.

LTU technology

Based on Ubiquiti's LTU technology, LTU Lite is not limited by standard 802.11 Wi-Fi technology. Its custom LTU silicon-radio architecture provides up to 600+ Mbps¹ of actual TCP/IP bandwidth and modulation rates up to 4096QAM². LTU Lite supports bridged and embedded NAT router mode to suit your specific deployment.

Wide channel flexibility

Channel width flexibility allows for TX and RX channel independence and frequency configuration anywhere in the radio band to avoid local interference. Channel width options include - 10 MHz - 20 MHz - 30 MHz - 40 MHz - 50 MHz - Up to 100 MHz*

Convenient management

To manage LTU Lite we have two options: LTU configuration interface and Ubiquiti network management system (UNMS™). Each option allows you to configure LTU Lite manually and within LTU configuration interface you can manually configure or manage your device from the AP side using Find My AP function.
