Full product description

Unlimited expansion possibilities

Ubiquiti mFi® management system is managed and monitored using the mFi controller software. **mFi Controller** allows you to **create rules** that cause actions based on data from mFi sensors. For example, when motion is detected, the light can be switched on. and when high temperature is detected, the fan is switched on. The mFi platform is compatible with devices from other manufacturers.

Modern motion detector

The mFi-MSW device has a motion sensor using both passive **infrared** motion sensors and microwave frequency motion sensors - to minimize the likelihood of false alarms. It has brackets that allow it to be mounted on the wall. The sensor is designed for security, motion detection, device planning and other intelligent applications.

Simple configuration
