Price: **206.71 zł** gross / 168.06 zł net

Manufacturer: UBIQUITI

Referention number: DNXJGPSKEIR

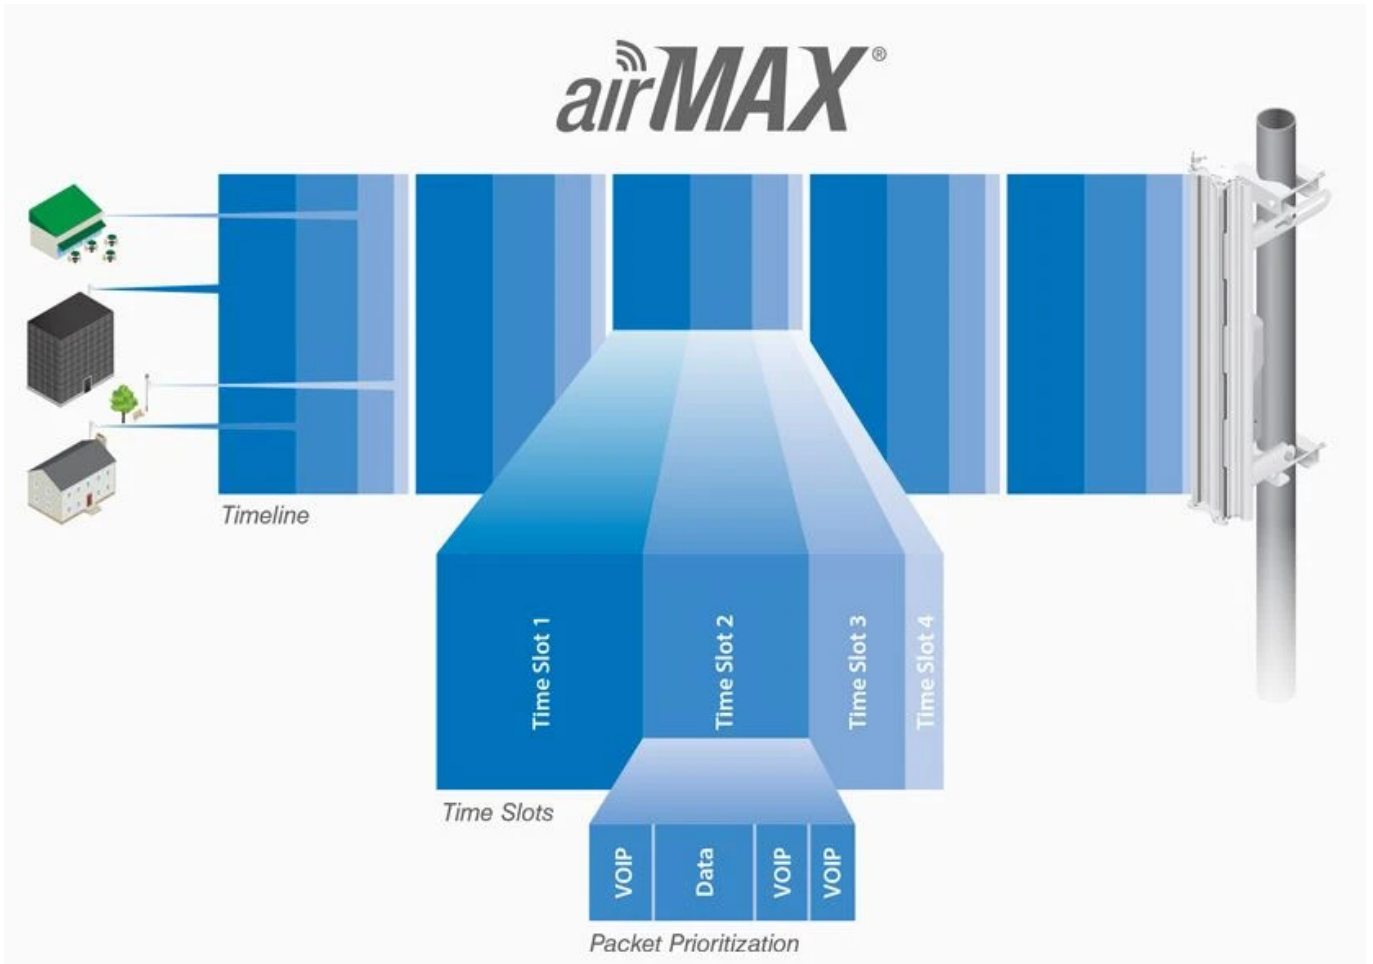

### Full product description

### Improved design and transmission performance

**Rocket™ M** is ideal for Point-to-Point (PtP) or Point-to-MultiPoint (PtMP) applications. It works seamlessly with **airMAX Sector**, **RocketDish**, **Omni** and **Yagi** for PtP and PtMP links. Each airMax antenna has a built-in mount for the device, so no tools are needed.

### Advanced software technology

Ubiquiti's airMAX® technology has been proven in millions of devices worldwide, demonstrating exceptional performance in outdoor environments. The **TDMA** airMAX protocol enables unprecedented scalability, high throughput and low latency in unlicensed, multipoint networks.

## Flexibility of channel and frequency

Built to withstand harsh environmental conditions, Rocket™ M is available in several models and supports multiple channel capacity, depending on the model.

## Signal analysis tool

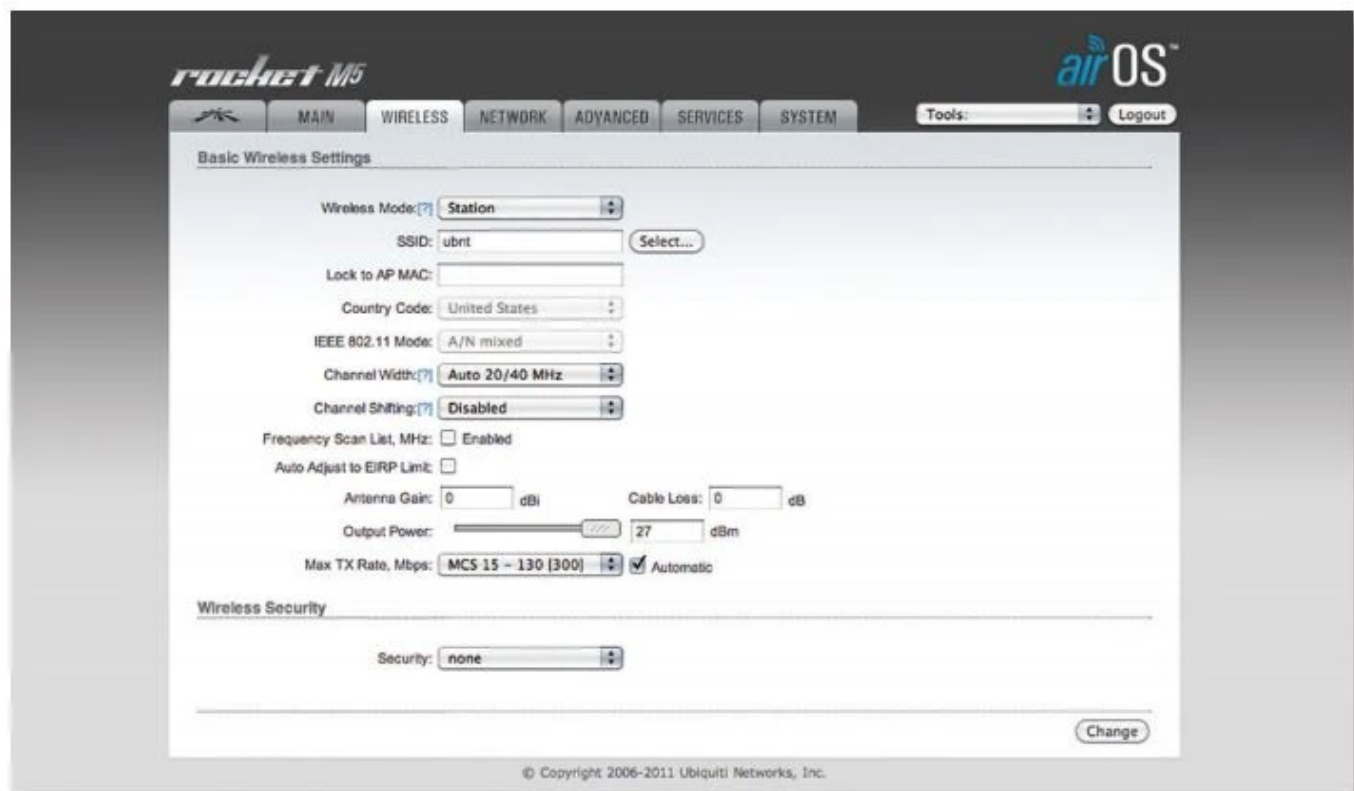

**airView®** software allows operators to identify noise signatures and analyze frequency utilization and activity levels on site, so that new access points can be set to **the least used channels** to optimize wireless network performance.

## Intuitive modern software

The software is designed to provide an intuitive user interface, **airOS® 5** is also an advanced operating system.

- airMAX protocol support
- Long-range PtP Link mode
- Transmission power control: automatic/manual
- Automatic distance selection (ACK Timing)
- Equipment statistics
- Diagnostic tools

## Powerful and intuitive web application for management

**airControl** software monitors the server network and allows operators to centrally manage entire networks of Ubiquiti devices. It has functions such as: network map, device status, mass updates, browser management and task planning.
