Full product description

Offering exceptional reliability and performance, the Ubiquiti UACC-Cable-PT-0.5m cable is the perfect solution for powering your devices.

Designed with the highest standards of safety and durability in mind, this cable is designed to power Ubiquiti devices compliant with the Power TransPort standard. With a length of 0.5 meters and robust tin-plated copper construction, you can rest assured that your devices will be powered stably and safely.

High performance and safety

The Ubiquiti UACC-Cable-PT-0.5m power transport cable **is made of 12 AWG tinned copper**, which ensures excellent conductivity and minimal power loss. This makes the cable ideal for powering devices with high power consumption. The VW-1 flammability rating provides an extra layer of safety, **protecting against fires and providing peace of mind during use.**

Durable and resistant construction

The jacket made of thermoplastic elastomer guarantees resistance to mechanical damage and extreme temperatures from -40 to 80°C. The power transport cable is therefore ideal for both indoor and outdoor applications. Thanks to its robust construction, **the cable is resistant to harsh environmental conditions**, ensuring long-lasting and reliable performance.

Compact size and lightweight

The 0.5-meter length of the power cable weighs just 91 g, making it **lightweight and easy to install** even in space-constrained areas. Its compact size allows flexible and convenient cable management. The white color of the cable makes it easy to integrate into different environments, maintaining the aesthetic appearance of the installation.
