Manufacturer: EXTRALINK

Referention number: DNXGGMMOIRMMMQ

Information:

The 21 V cordless drill driver is a versatile tool for assembly, renovation and workshop tasks. It offers 35 Nm of torque, two speeds of 350/1450 RPM and clutch adjustment from 1 to 35 with MAX mode, ensuring precise screwdriving and effective drilling in wood and metal. The built-in LED and spirit level make work easier in more demanding conditions, while the ergonomic handle increases user comfort. The set includes two 2.0 Ah Li-Ion batteries, a charger, a carrying case and a wide range of accessories, including adapters, sockets, drill bits, bits and a flexible extension.

Full product description

Versatile application

The 21 V cordless drill driver has been designed for assembly, renovation and workshop tasks. A torque of 35 Nm helps to drive and remove fasteners efficiently, as well as drill holes in wood and metal. The tool is ideal for assembling furniture, fitting interior fixtures and carrying out everyday repairs at home, in the garage and in the workshop.

Two speed ranges

The device offers two operating speeds: 350 RPM and 1450 RPM. The lower speed makes controlled screwing of screws and fasteners easier, while the higher range supports drilling in various materials. The option to choose the appropriate speed helps adapt the working method to the task at hand and the accessories being used.

Torque adjustment

The clutch with adjustment from 1 to 35 and MAX mode allows the tightening force to be matched to the type of material and mounting components. This solution helps reduce the risk of damaging surfaces and driving screws in too deeply. The function works well for both precision work and more demanding tasks.

Work under control

The built-in LED illuminates the work area during assembly in poorly lit rooms. The spirit level on the housing helps control the positioning of the tool. The ergonomic handle and solid construction contribute to more comfortable work even during longer projects.

Two batteries included

The set includes two 2.0 Ah Li-Ion batteries. The second battery allows you to continue working after the first one runs out, reducing downtime. Lithium-ion technology lets you recharge the battery at a convenient time, making it easier to prepare the device for further tasks.

Complete accessory set

The set includes a 21 V drill driver, two 2.0 Ah Li-Ion batteries, a charger, a carrying case, 1/4", 3/8" and 1/2" adapters, a set of sockets, wood and metal drill bits, bits and a flexible extension for working in hard-to-reach places. All items have been placed in a practical case that makes storage and transport easier.
