Full product description

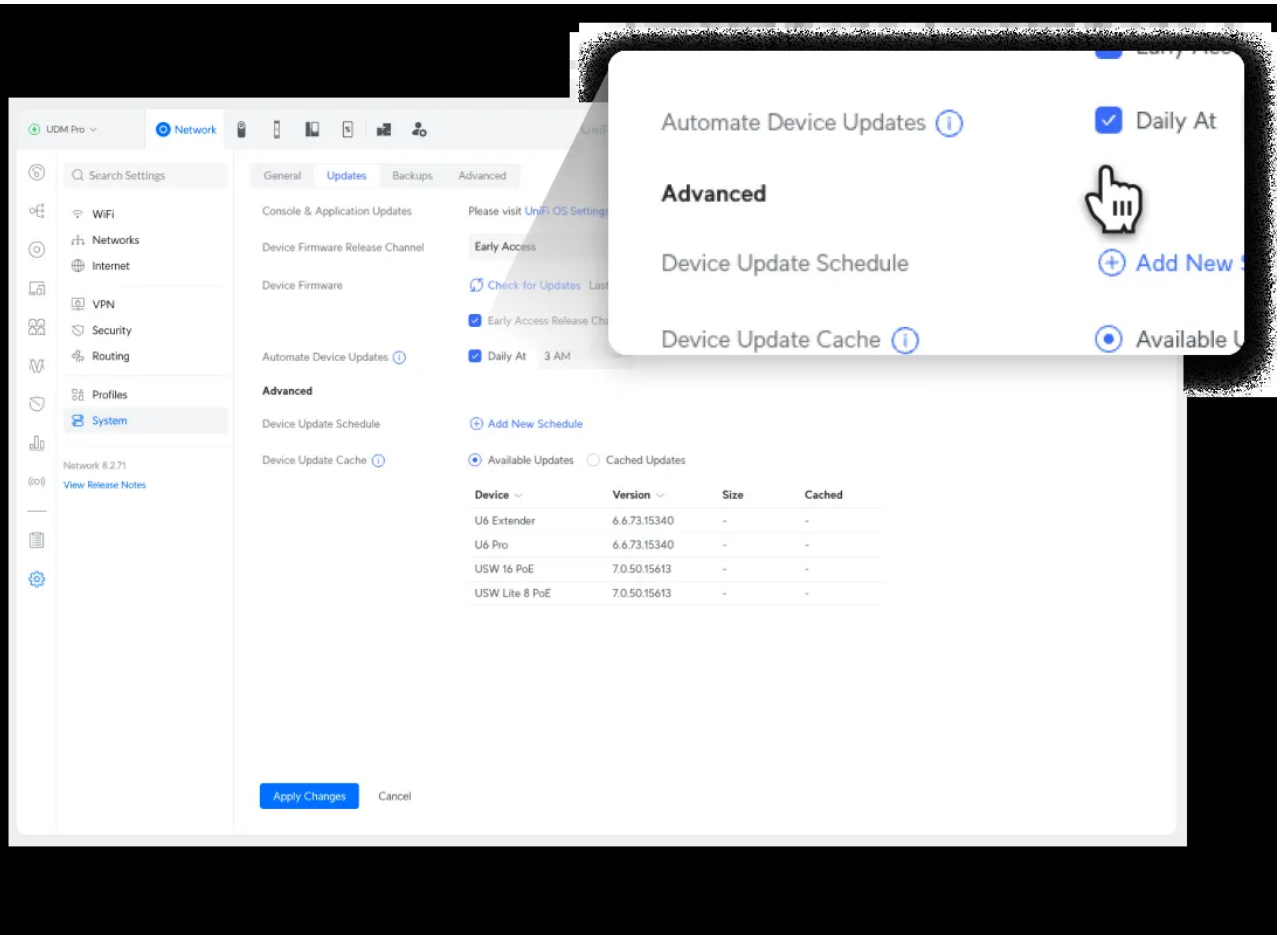

Manage your lighting over the network using a UniFi LED switch

Designed for companies, the UniFi LED is designed to fit seamlessly into existing UniFi networks. The dimmer switch offers the highest light output and lighting quality. The UniFi LED panel can be controlled in three ways: by a UniFi switch, a mobile application or via a browser.

UniFi LED controller

Use the UniFi controller to discover LED panels or dimming switches or check the status of the devices and their statistics. Create and manage groups and create a lighting schedule. As the administrator, you directly control the entire installation. You can specify when each light source should switch on and off.

UniFi LED mobile application

The application allows you to control and configure it using a **mobile device**. It has all the functions of a UniFi LED controller such as device detection, group management or schedule configuration. The application can find and configure nearby LED panels and dimmers using **Bluetooth**.
