Price: **823.55 zł** gross / 669.55 zł net

Manufacturer: UBIQUITI

Referention number: DNXXGHILJIRMMGK

Information:

Ubiquiti UP-AI-Port is a device that extends Ubiquiti cameras with advanced AI functions, enabling real-time image analysis, motion detection and object classification for more effective monitoring and a higher level of security. It is compatible with UniFi Protect 5.1 and later, ensuring easy integration and convenient management from the central system. PoE power supply simplifies installation by eliminating the need for additional power adapters, while support for PoE+ and PoE++ increases flexibility. The durable polycarbonate housing, together with resistance to temperatures from -20°C to 40°C and humidity of 20%-90%, means the device also performs well in demanding outdoor conditions.

Product features

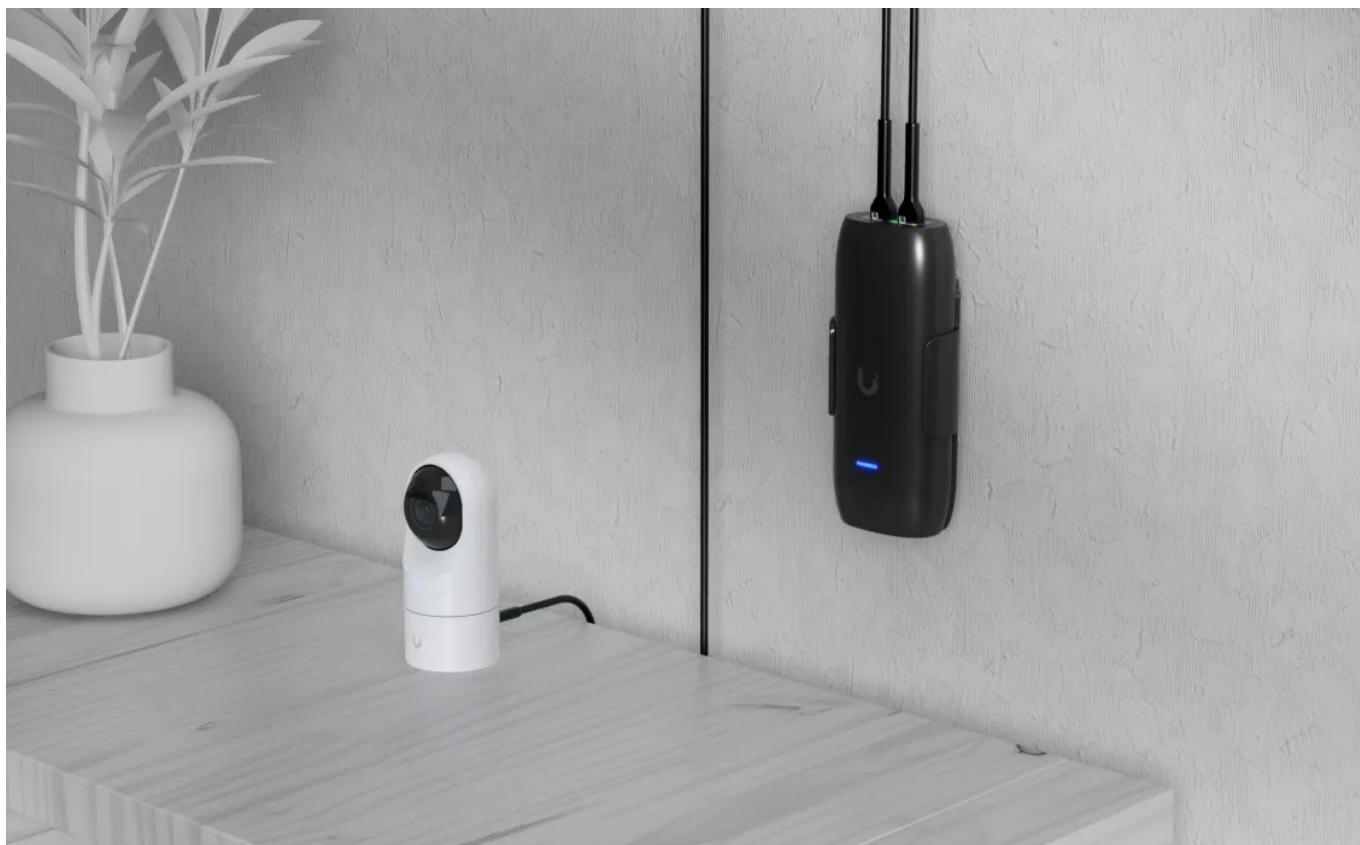

Height	150 mm
LED indicators	Yes
Wall mountable	Yes
Width	64 mm
Depth	38.4 mm
Connectivity technology	Wired
Card reader slot	Yes
Resolution	3840 pixels
Mounting kit	Yes
Compliance certificates	CE
Humidity measurement range	20 - 90%
Operating temperature (T-T)	-10 - 40 °C
Reset button	Yes
Compatible memory cards	SD
Ethernet LAN	Yes

Power source type	PoE
Product colour	Black
Watch case material	Polycarbonate (PC)
Type	Enhancer
Designation	Indoor
Product weight	258.3 g

Full product description

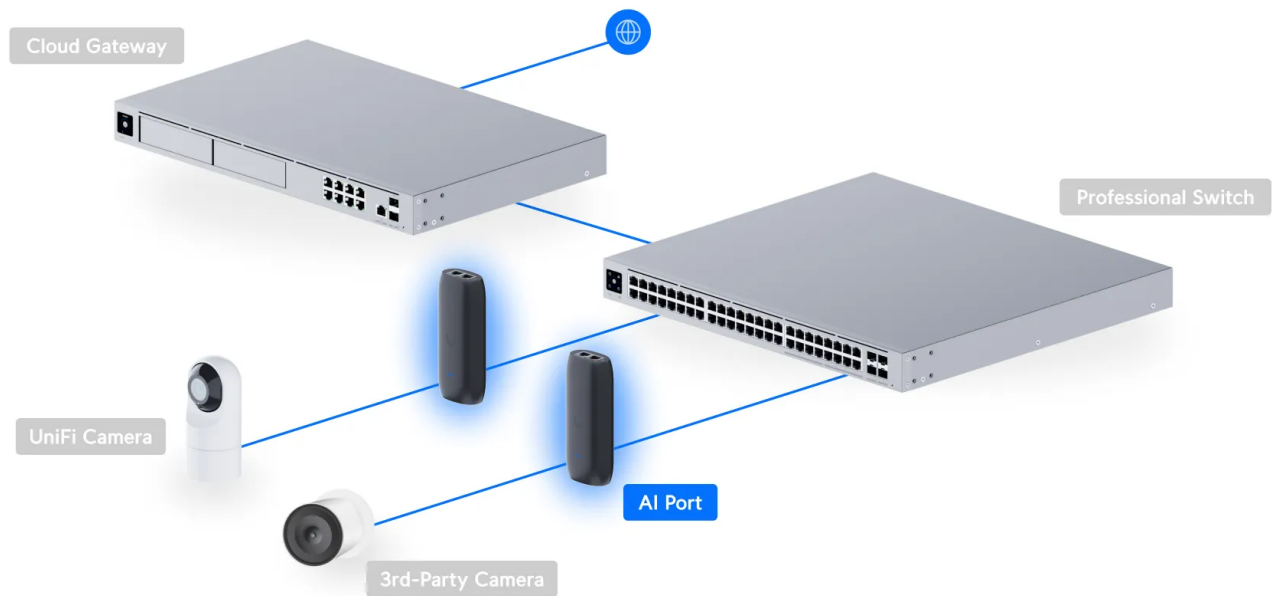

Ubiquiti UP-AI-Port - Device enhancing cameras with AI functions

Ubiquiti UP-AI-Port is a device that extends the functionality of **Ubiquiti** cameras with advanced **AI functions**. Thanks to this device, your IP cameras gain the ability to analyse images in real time, which improves monitoring and security in your network. **Ubiquiti UP-AI-Port** enables motion detection, object classification and many other functions that support security management processes.

Enhancing camera functions with artificial intelligence (AI)

Ubiquiti UP-AI-Port introduces advanced **artificial intelligence (AI)** to surveillance systems. With it, **Ubiquiti** cameras can perform **image analysis** in real time, enabling object detection and classification. This function increases detection accuracy, allowing for more effective monitoring and response to events.

Easy integration with the UniFi Protect system

The device is compatible with the **UniFi Protect** application in version **5.1 and later**, which enables seamless integration and full use of its capabilities. **Ubiquiti UP-AI-Port** allows AI functions to be managed from the central monitoring system, simplifying configuration and everyday use. This allows users to focus on monitoring and analysing results rather than on complicated configuration.

PoE power supply and space saving

The device supports **PoE** (Power over Ethernet), which allows **Ubiquiti UP-AI-Port** to be powered through the same Ethernet cable that carries data. This makes installation simpler and eliminates the need for additional power supplies. If higher power is required, **PoE+** or **PoE++** will provide the appropriate power for working with more demanding cameras.

Weather resistance

Ubiquiti UP-AI-Port is characterised by **weather resistance** thanks to a polycarbonate housing, which provides protection in harsh conditions. It is an ideal solution for outdoor applications, as the device operates in temperatures **from -20°C to 40°C**. In addition, the device is resistant to humidity in the range of **20% - 90%** without condensation, making it resistant to changing weather conditions.
