Full product description

Protection of your garden at the highest level

Extralink Agrotexile 80g is a reliable solution for anyone who dreams of a beautiful garden without stubborn weeds. The **1.6 x 100 m, 80g/m²** anti-weed mat agro-textile is the perfect choice to protect your plants from unwanted weeds, providing them with ideal conditions for growth. Thanks to its **UV resistance** and easy installation, you can enjoy healthy plants without the need for frequent bed maintenance.

Effective weed blocker

Agrotkanina black UV is extremely effective in blocking the growth of weeds, providing plants with space to grow without competition. With a **solid weight of 80g/m²**, the fabric creates a barrier to weeds by restricting light, preventing them from germinating. That means less weeding and **greener gardening** without chemicals.

UV resistance

The black agro-textile is equipped with **UV resistance**, which ensures its long-term durability, even with prolonged exposure to the sun. As a result, the agro-textile **can be used for many seasons** without losing its protective properties. This is an ideal solution if you care about the longevity of the product and avoid frequent replacement.

Water and air permeability

Despite its high effectiveness against weeds, the agro-textile anti-weed mat provides adequate **air and water permeability**. This means that plants have constant access to moisture, and the soil is protected from excessive drying. **The structure of the fabric** makes it possible to mulch the soil at the same time, which further promotes healthy root and shrub growth.

Easy installation and universal application

The 80g agro-textile fabric with a width of **1,6 m** and a length of **100 m** is easy to install - just spread it in the place where you want to protect plants from weeds. Thanks to its strength and the possibility to fix it with **anchors or pins**, the agro-textile perfectly adheres to the ground, protecting plants from weeds and **mechanical damage**. It is great for home gardens, as well as flowerbeds and garden nurseries
