Full product description

IPS 1000 12V voltage converter

The VOLT IPS 500 PLUS 24V VOLT IPS 500 PLUS converter is used to supply electrical equipment requiring 230V AC voltage from batteries. VOLT IPS is a very popular and well made universal inverter series, thanks to its **simple design and low price** the inverter is easily accessible to everyone. The device works in places where it is not possible to connect directly to the mains or during a power failure. Thanks to its compact size, the inverter can be used anywhere. In addition, the device is designed to be powered from a 12v. cigarette lighter socket.

Modified sinusoidal

VOLT IPS series inverters produce a so-called **modified/sinusoid at their output. This is a rectangular alternating voltage whose rms value is identical to the rms value of the sine waveform occurring in the power network. Thanks to this method of voltage generation, it is possible to significantly reduce the price and increase the reliability of the whole device.**

Application of the inverter

- TVs (TV sets, tuners, hi-fi, dvd)
- charger power (smartphones, tablets, phones, laptops, gps)
- Office equipment (printers, fax machines, computers, monitors)
- Small household appliances. (Gully, toaster, toaster, kettle)
- Lighting (LEDs, halogens, garden countersink, bulbs)
