Price: **119.00 zł** gross / 96.75 zł net

Manufacturer: XIAOMI

Referention number: DNXXGMLRJRMMPM

Product features

Height	24.55 mm
Panel type	LED
Cartridge type	AAA
Width	300 mm
Depth	300 mm
Shape	Square
Units of measurement	kg
Step precise	100 g
Material	Glass
Maximum weight	150 kg
Bluetooth version	5.0
Bluetooth	Yes
Number of batteries supported	3
Power source type	Battery
Product colour	White
Auto power off	Yes
Body Mass Index (BMI) measuring	Yes
Type	Electronic personal scale
Product weight	1450 g

Full product description

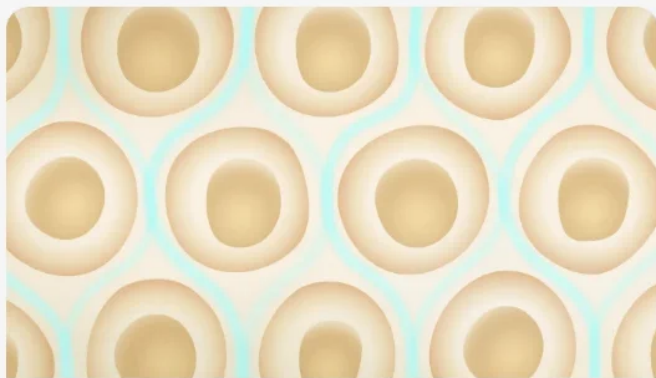

Check if your body is healthy

Do you wonder how healthy your body is? **Just step onto the Xiaomi Body Composition Scale S400** to find out. This scale **accurately measures your body data** and provides a detailed analysis of your physical condition, identifying hidden obesity risk factors. This allows you to scientifically manage your body shape and health.

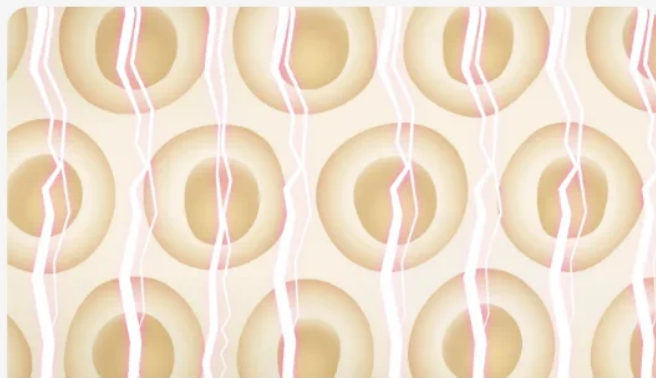

Precise measurement of bioelectrical impedance

The Xiaomi Body Composition Scale S400 uses **dual-frequency bioelectrical impedance measurement**, providing a new level of precision. By alternating high- and low-frequency currents, the scale can accurately **measure the impedance values of intracellular and extracellular fluids**. This allows the scale to accurately capture physical data such as body fat content, water level and muscle mass.

Niska częstotliwość 50 kHz

Zmierz płyn pozakomórkowy
Zmierz zawartość wody we krwi i płynach
tkankowych

Wysoka częstotliwość 250 kHz

Zmierz płyn wewnątrzkomórkowy
Pomiar składników komórkowych mięśni,
tłuszczu, kości i narządów

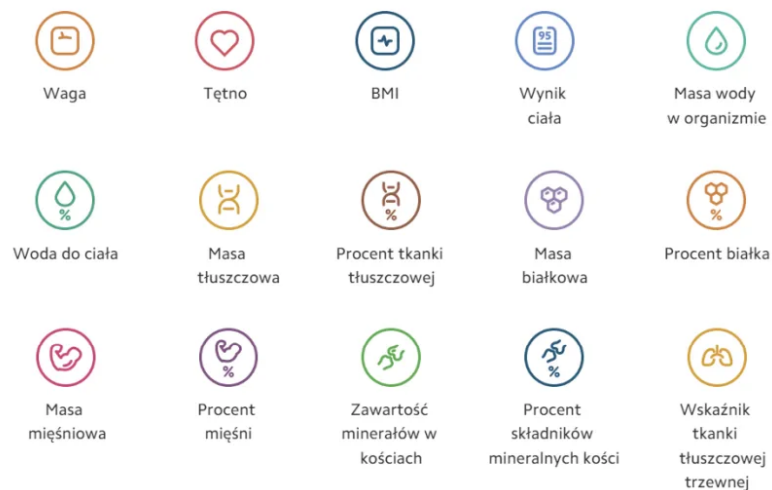

The gold standard in fat measurement

Measuring body fat with the Xiaomi Body Composition Scale S400 is professional and accurate. The scale has a **correlation coefficient of ≥ 0.93 for key data such as body fat percentage and fat mass**, which is in line with the DEXA industry gold standard. As a result, you can be sure that the data you receive is reliable and accurate.

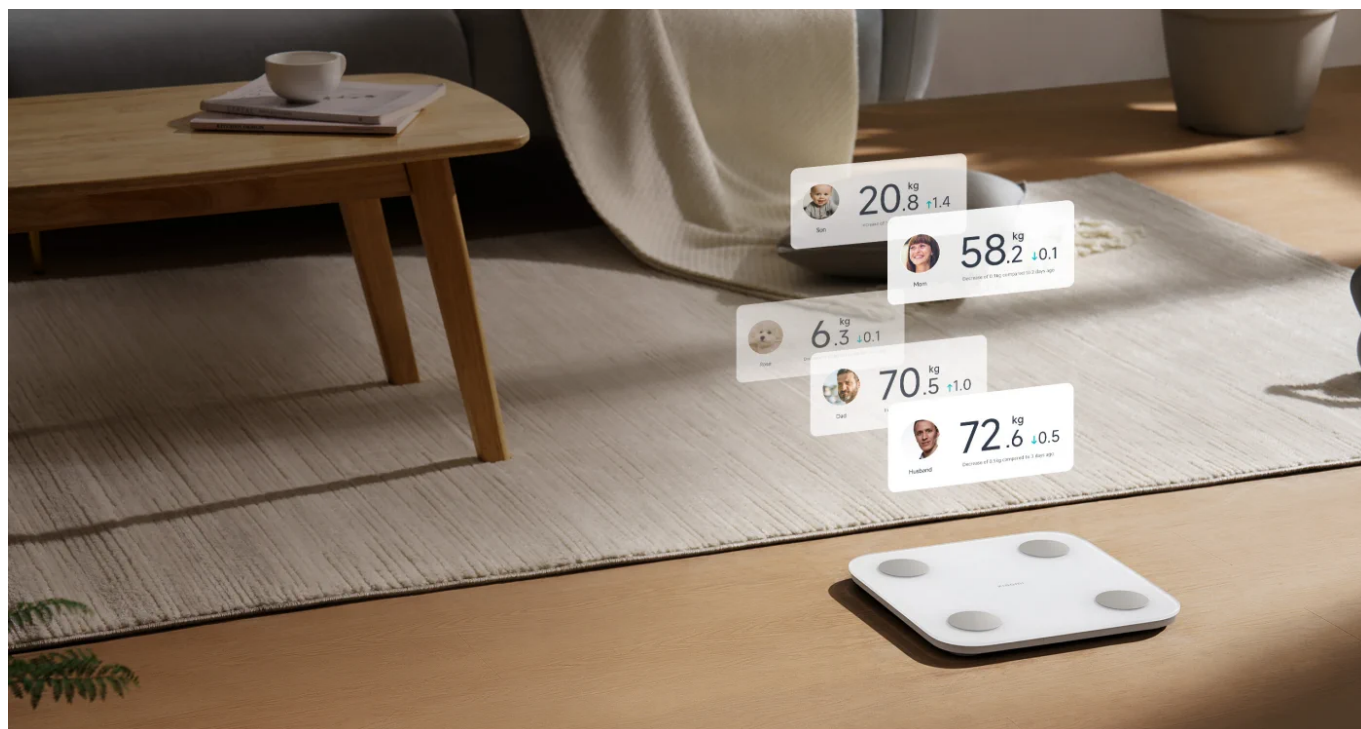

Analysis of 25 body composition indices

One weighing can generate an analysis report of 25 body composition indicators, assessing parameters such as fat content, muscle mass, water levels, protein and bone mineral density. The scale also assesses visceral fat index and identifies hidden obesity risks. With an in-depth analysis of your health, you can quickly and easily identify any changes.

For the whole family

With a fat-measuring algorithm that can be calibrated for young people, the **Xiaomi S400 scale is suitable for all family members**. Parents can quickly assess their children's health and adjust their diet and exercise schedules to maintain a healthy weight and body fat levels, avoiding the risks associated with obesity.

Heart rate monitoring

The Xiaomi Body Composition Scale S400 allows you to **monitor your resting heart rate**. A high or low heart rate can be a sign of a health problem, so it's worth keeping an eye on it. With the Xiaomi S400 bathroom scale, monitoring your heart rate becomes convenient.

Multifunctional weighing modes

The scale offers multiple weighing modes: **measuring small objects** with an accuracy of 0.1 kg, **baby and pet weighing mode**, **guest mode**, where measurement data is not saved, and **a wide measurement range from 0.1 kg to 150 kg**. With the **Mi Home/Xiaomi Home** app, you can quickly switch between modes, such as weighing with a baby or balance test.

Accuracy and stability with long battery life

The Xiaomi Body Composition Scale S400 has **large electrodes** for increased conductivity and a larger, **non-slip surface** for stability. **The battery only needs to be replaced every six months**, providing longer and better use for the whole family.

58mm

Podkładka elektrodowa o dużej średnicy

40mm

Powiększona powierzchnia antypoślizgowa

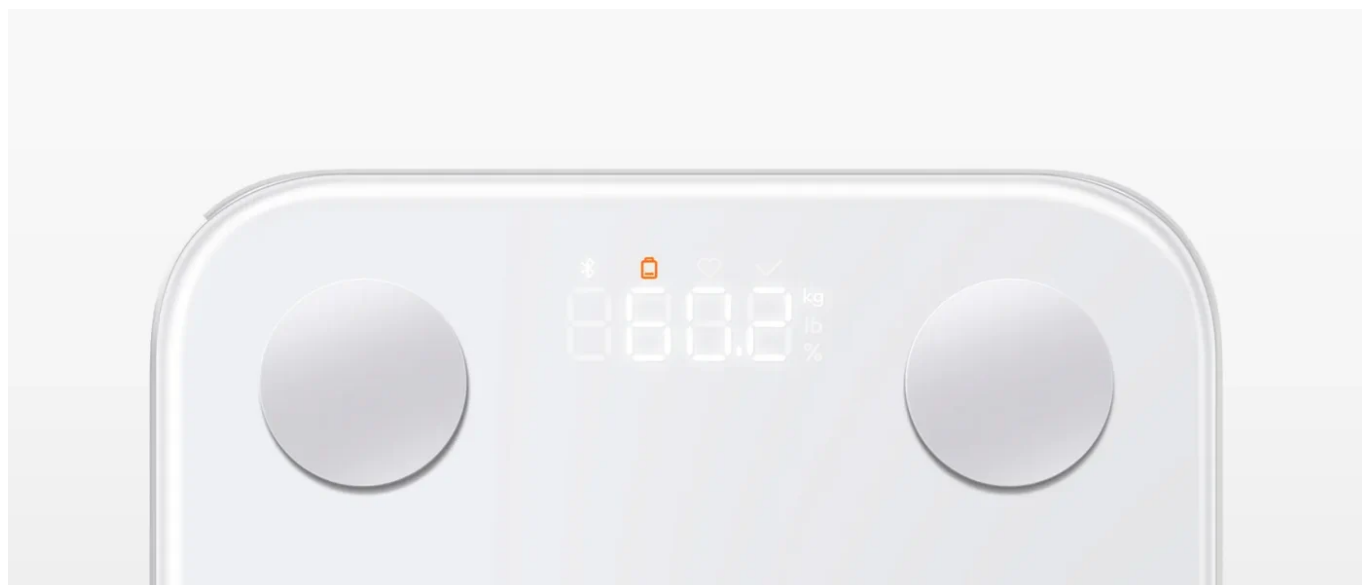

180-dniowy

Długi czas pracy baterii

Interactive display

On the scale's display, you can see key data such as **fat content, heart rate and battery level**. With the Mi Home/Xiaomi Home app, you can get **detailed reports** at any time to help you better understand your health.

Automatic synchronization and instant access

The scale can be paired with a phone using a **Bluetooth® gateway**. The measurement data will be automatically saved and uploaded to the server, allowing convenient viewing at any time via the app.
