Full product description

Latest Xiaomi Buds 3T Pro White Headphones

Introducing **Buds 3T Pro**, **Xiaomi's** new **True Wireless** in-ear headphones that are fully wireless so you can give it your all while working out, playing games or watching movies. Wires and noise won't get in the way! With unique, state-of-the-art **ANC technology** that reduces background noise so you only hear what you really want to hear.

Benefits of Xiaomi Buds 3T Pro White

- Active noise reduction of up to 40dB - 3 1 modes for everyday use
- Ergonomic design - close-fitting, lightweight and comfortable
- HRTF professional tuning - studio level calibration standard
- Dual-magnet dynamic DLC-coated driver - sensitive to the most subtle details
- Hi-Fi sound quality - high definition sound with very low distortion
- Advanced surround sound technology for immersive audio
- Dual clarity mode - allows you to talk freely while wearing earbuds
- Extra long battery life - listen longer

Elegant design, great sound

The case's **streamlined design** is inspired by the Möbius loop structure, with **sophisticated and elegant styling**.

Find peace and quiet on busy streets

The **40dB noise reduction depth** can reduce ambient noise by up to 99%. Move unwanted noises away from you and create your own world of great sounds.

Eliminate noise the right way

All-new adaptive noise reduction **technology** monitors the level and type of ambient noise in real time and automatically selects the appropriate noise reduction mode. It understands sound and understands you even better.

Enjoy the music and talk freely

In Transparency mode, **listen to music while hearing ambient sounds**. Speech intelligibility mode lets you talk freely even with headphones on.

Xiaomi's first dimensional audio product - Change your listening experience

Traditional stereo sound means hearing music only from the left and right sides. But with **Immersive Sound** technology, sound comes to you from all sides. With head tracking, this sense of realism is even greater. When you turn your head, the sound stays where it's supposed to be, just as if you were really walking in nature.

Lightweight and wearable for hours

Weighing just 4.9g, the in-ear headphones have **an ergonomic design** with a 14-point curved surface that follows the contours of the ear canal, and their structure with overlapping centers of gravity creates a stable triangle that fits snugly in the ear to prevent falling out during workouts.

Switching and selecting with a simple touch

To switch modes, pause music or select other functions, **easily tap** the convex part of the handset.

Extra long battery life - music never stops

Play time **up to 24 hours** when combined with the charging case. Charging case supports **Qi wireless** charging protocol, compatible with various charging devices
