Full product description

Versatility and convenience of shearing

The Xiaomi Hair Clipper 2 is a hair clipper that combines **19 precise length settings with a dual speed mode**. This makes it an indispensable hair styling tool for every member of the family. The extra-hard blades, covered with a special double coating, provide maximum comfort and protection for sensitive scalps. The full **IPX7 waterproof rating** guarantees easy cleaning, and **the powerful battery** allows for **up to 6 full haircuts** on a single charge.

Key advantages of Xiaomi Hair Clipper 2 razor

- **Comfort and scalp protection:** Double-coated blades with DLC coating and R-shaped tip minimize friction and prevent irritation.
- **Long-lasting performance:** The battery offers up to 180 minutes of cordless use, contributing to greater freedom of use at home and on the go.
- **Multi-tiered precision:** The **19-step** length **adjustment** makes it easy to create a range of styles, from ultra-short to longer styles.
- **Easy care:** IPX7 waterproof, the razor can be rinsed under running water, takes care of quick and thorough cleaning.

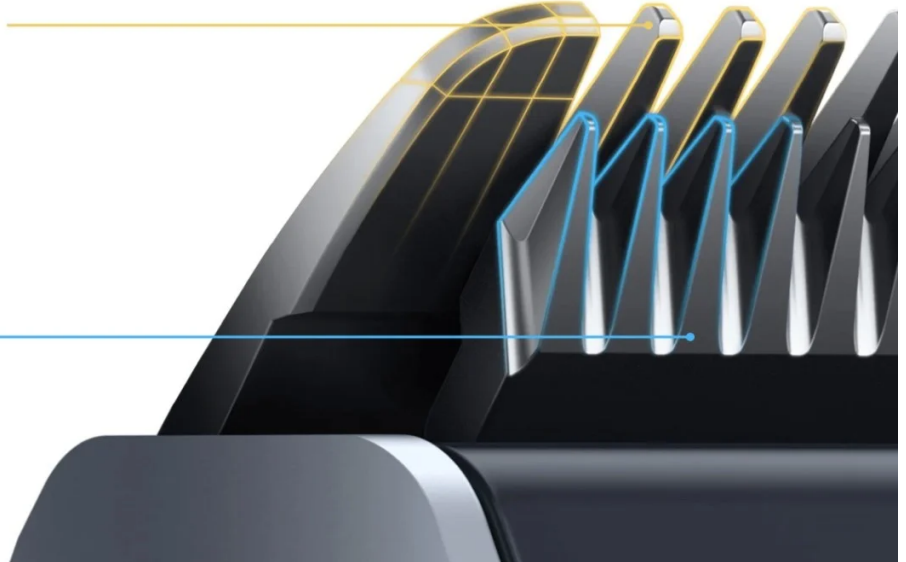

DLC technology and ceramic precision

At the heart of the razor are innovative cutting blades. The immovable blade, made with **powder metallurgy technology**, has been coated with a double layer - **DLC (Diamond-Like Carbon)** and graphite coating, which dramatically increases its strength and resistance to abrasion. **A movable blade** made of high-quality ceramic provides unparalleled sharpness and longevity. This synergy of materials effectively reduces friction and heat, eliminating discomfort. In addition, the rounded shape (R-shaped) of the fixed blade is key to protecting the skin from accidental cuts and irritation.

Precision control with 19 settings

The razor's phenomenal versatility comes from its **19-step easy length adjustment**. The basic 5-step precision setting (from 0.5 mm to 1.7 mm) is ideal for shading and finishing. The included two comb attachments expand the possibilities with 14 additional fixed lengths, adjustable in 2mm increments (2mm to 14mm and 16mm to 28mm). Such an array of options provides full styling freedom - from ultra-short, "on zero" styles to trendy, longer hairstyles.

Two modes of operation - gentle and turbo

The Xiaomi Hair Clipper 2 guarantees the perfect power match for every hair type, thanks to its **dual speed control**. There is a **gentle** mode (low speed), dedicated to thinner hair, and a **turbo** mode (high speed), ideal for efficient trimming of thick and stiff strands. The cooperation of a powerful motor with this function ensures an exceptionally smooth and efficient cut, aided by an intelligent mechanism that prevents the blades from jamming.

Powerful battery

The razor offers full flexibility with the ability to operate in **wireless mode or while powered by the mains**. A full charging cycle takes just **2.5 hours**, and in return you get up to **180 minutes of continuous wireless operation**. Such autonomy allows you to serve your entire family (up to 6 full haircuts) on a single charge. The built-in digital display provides a constant view of the battery status and current mode of operation.

IPX7 class water resistance

The device's total water resistance, certified by **IPX7 rating**, means that the entire razor is fully washable. The user can rinse it **directly under running water** without worry, which not only significantly simplifies and speeds up cleaning, but also guarantees maximum hygiene in use.

LED signalling

Intuitive LED signaling allows you to constantly control key parameters of the razor. At any time you can monitor the exact **level of battery charge** and **the active speed mode**. This solution provides full transparency and predictability of the device's operation, eliminating the risk of unexpected discharge during a haircut.

Universal USB-C charging

Thanks to its **USB Type-C port**, the razor guarantees power versatility. You can power it from almost any source, including standard mains chargers, laptops or USB outlets in your car. This versatility allows you to charge and use it at the same time, giving you the freedom to cut hair anywhere, anytime, without having to take a specialized charger with you.
